[1.0] INTRODUCTION

Silent War is a solitaire simulation of the United States' submarine war against Imperial Japan during the Second World War. The scenarios allow players to recreate various stages of the war or the entire campaign. In these scenarios, each player takes on the role of Commander Submarines, U.S. Pacific Fleet (ComSubPac), deploying available submarines from either Pearl Harbor or Australia in order to attack the Japanese Navy. Additionally, in the patrol game, using single submarines, players can recreate some of the war's most famous patrols.

[1.1] How to Read these Rules

To help you quickly familiarize yourself with the game, a detailed sequence of play has been created. The rules follow this sequence: Set up the game, and follow the sequence of play to get an overview of game events. Then, begin the game, referencing the rules as you go. It is suggested new players first play a patrol scenario before proceeding to play a campaign game. Players may find it very helpful to read through the Comprehensive Example of Play found at the rear of the scenario book. This provides a solid overview of a typical turn and will allow players to see past the rules into the process.

[2.0] GAME COMPONENTS

Silent War has the following components:

One Game Map
One Combat Display
One Charts & Tables Card
One Submarine Tender Card
One Counter Explanation/Sense of Scale Card
One War Mix Table/ULTRA Table Card
One SOP card (Silent War and Steel Wolves)
Five Counter Sheets
One Rules Book
    War Event Table
One Scenario Book
    Example of Play
One Ten-Sided Die
One Box and Lid Set

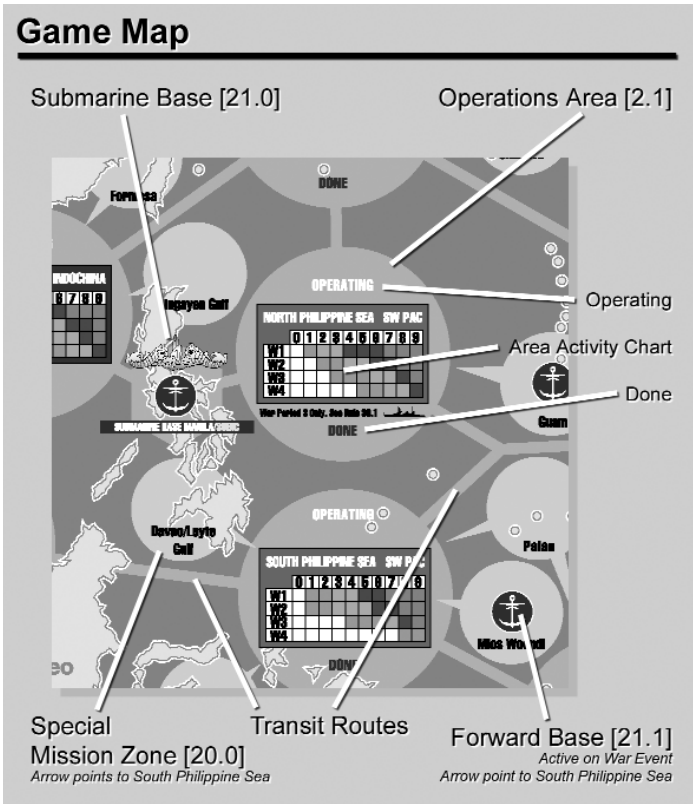

Note: Players must supply four opaque cups.

[2.1] The Game Map

The map portrays the Pacific Theater of Operations and contains graphic representations of submarine transit routes and areas where submarines conducted operations and special missions, as well as a number of displays and charts necessary for play. There are three types of play "Areas" on the map:

- **Submarine Base:** Represented by a hexagon and a port (anchor) symbol.
- **Operations Area (OpArea):** Large circular area containing an Activity Chart. An Operations Area is divided into an Operating section (top) for the submarines conducting combat in that Area and a Done section (bottom) for submarines which have completed their combat or movement in that Area.
- **Special Mission Zone (SMZ):** Small circular area without an Activity Chart, that points to an OpArea. If a submarine tender is in the zone it is a forward submarine base. If no tender is present, these zones can only be entered by a submarine when activated by a War Event.

All Areas are linked by transit routes, a series of lines that delineate movement for submarines. Only submarines move on the map. Each OpArea belongs to a geographic group, noted in text on the top of each Activity Chart (examples: Empire, Indochina, North Pac(ific), South Pac(ific)).

[2.2] Game Charts and Tables

There are a number of charts and tables in Silent War, some printed on the map and others on a separate card.

Map tables include: Individual Area Activity Charts, Search and Contact Chart, Transit Event Table, Submarine Damage Table, and Endurance Table.

Printed on the Charts and Table card is the Attack Results Table, Counterattack Table, Combat Events Table, Transit Event Table, Search and Contact Table, Endurance Table, Enemy Submarines Table, Torpedo Improvement Table, and War Period Tables.

Printed on a separate card is the War Mix Table Table and the ULTRA Table.

Printed in the Rules Booklet are the War Event Tables for all 4 War Periods and the East Wind Early scenario.

Map displays include: the Tonnage & Ships Sunk/Submarines Lost Track, Current War Period, Current Torpedo Value Track, and the Turn Record Track. There are also five Base Displays: Pearl Harbor, Fremantle, Brisbane, Dutch Harbor, and Manila/Subic Bay. Each Base Display contains a Repair Hold box, with three levels of patching up, a Ready for Sea box, Pier Side box, and "Broom Box" (for subs that have just returned from sea).

On the Submarine Tender/Surabaya Display card there are eight Submarine Tenders and the Surabaya Display.

© 2012 Compass Games, LLC

[2.3] Playing Pieces

There are several different types of pieces in the game:

A. SUBMARINES

Every U.S. submarine that participated in the Pacific War is represented by its own playing piece. There are two sides to every U.S. submarine: **Transit**, the light blue side, and **Patrol**, the gray side.

Transit Side: The Transit side has the name and class name of the submarine plus the following information and ratings:

- **Entry Date:** The date in which the submarine arrives in the game (W/S means at "War Start", 12/41).
- **Speed:** The number of OpAreas that a submarine may move in a single turn.
- **Range:** The maximum number of OpAreas that a submarine may be from any friendly Base at any time.
- **Readiness:** The value the player must roll to "ready" the particular submarine for sea.

Patrol Side: The Patrol side has the name and class name of the submarine plus the following ratings:

- **Attack:** The fighting value of the submarine, a mixture of the number of torpedo tubes the submarine has, whether or not the submarine has tubes both fore and aft, and its overall loadout of torpedoes.
- **Defense:** An evaluation of the submarine's ability to maneuver, speed of dive, diving depth, tonnage, and the "robustness" of her design and construction. Size matters.
- **Tactical:** An estimation of the submarine's "handiness" in combat, a mixture of the measurement of her general modernity, engineering responsiveness, and most importantly, her combat systems, scopes, TDC, radar, sonar, as well as the progress of experience in naval construction.
- **Endurance**: A rating that determines if the submarine may remain on patrol or if it must return to base. This rating factors in torpedo loadout and consumables such as food, water, and fuel supply.
- **Range:** The maximum number of OpAreas that a submarine may be from a friendly Base at any time.

B. SURFACE SHIPS & EVENT MARKERS

Japanese units are represented by generic pieces that are used over and over again. These pieces have a type designation, tonnage rating, defense rating, and an anti-submarine (ASW) rating:

- **Type:** The general type of ship such as BB for Battleship, CV for Carrier. Following is a complete list of ship types used in the game:

  CV – Aircraft Carrier.
  BB – Battleship
  BV – Battleship Carriers (Ise class converted to hybrid carriers.)
  CA – Heavy Cruiser
  AC – Armored Cruiser
  AR – Repair Ship
  CL – Light Cruiser
  DD – Destroyer
  DE – Destroyer Escort
  AO – Oil Tanker
  AF – Stores ship, often refrigerated.
  M – Merchant, including freighter, transport, and auxiliaries such as minelayers, seaplane tenders, and submarine tenders.
- **Tonnage:** The size of the ship in thousands of Tons Light (the weight of the ship without cargo or fuel).
- **Defense Rating:** An estimate of how difficult a target the ship is to hit with a torpedo, and the robustness of her construction - an indication of her ability to withstand damage. Inherent explosion dangers are factored into this rating. Aircraft have no defense rating as they cannot be attacked.
- **ASW Rating:** An evaluation of the ASW capabilities of the ship and crew. Values are either 0, ½, 1, 2, 3, or 4. The ASW value of a ship with a Damage marker is zero. Aircraft only have an ASW rating.

Ships/aircraft with white top and bottom bands are Imperial Japanese Navy (IJN) units, while ships with yellow top and bottom bands are merchant vessels.

Some Japanese pieces have the word "COMBAT EVENT" on them. These pieces indicate that a unique event has occurred. (See Combat Events [19.2])

Some specific named Japanese ships are provided. These are the carriers Kaga, Shokaku, Shinano, and Taiho, the battleship Yamato, the repair ship Asahi, and the armored cruiser Izumo. If sunk, these ships and the BV hybrid battleship/carrier are removed from play.

There are three **Diligent Escort** pieces in the game. These are the Japanese surface ships that are printed on the front with an orange DD silhouette on a gray band. These represent particularly alert, aggressive, and tenacious destroyer captains who occasionally surprised a submarine skipper with their skill and daring.

C. TDC MARKERS

TDC markers represent the Target Data Computer (TDC) solutions on a target, incorporating the vagaries of target position relative to the submarine, and general good or bad fortune inherent in World War II submarine combat. TDC markers have target modification values between -3 and +3 printed on them.

D. SUPER SKIPPERS

These pieces represent the top U.S. submarine skippers of World War II. Super Skippers have a combat bonus rating which is added into the submarine's attack and defense calculations. One British and one Dutch skipper are provided if the optional Allied submarine rules are used.

E. MARKERS

The rest of the counter mix has markers for the game turn, recording the number of ships and tonnage sunk, the number of submarines lost and the current War Period in the game.

[2.4] Scale

The map represents the Pacific Ocean from Hawaii to the Malay Peninsula, and from Northern Australia to Alaska's Aleutian Islands and as such is somewhat scaleless. Each game turn is one week.

[2.5] Conventions

When rolling the ten sided die, zero (0) is always zero (0) and not ten (10).

© 2012 Compass Games, LLC

The following logical terms are used throughout the rules:

- #: number or value.
- >: greater than.
- <: less than.
- = or >: equal to or greater than.
- = or <: equal to or less than.
- drms: Die Roll Modifications (changes to the die roll + or -).

Fraction Rounding: Fractions are rounded up or down to the nearest integer. However, pay close attention; although a common convention was desired, Silent War uses both rounding-up, and rounding-down in order to keep as close to the statistical model as possible. When fractions are rounded, round all fractions less than one half (<0.499) down, and all fractions equal to or greater than one half (> 0.5) up.

[3.0] SETTING UP THE GAME

Choose a scenario: Lay out the map and sort the submarines by the month noted on each piece from the beginning through the end of the scenario. You can speed up setup by sorting the submarines by month or by Entry Date instead of having to pick through the countermix for a particular name. The Entry Date "w/s" indicates that the submarine is available at "war start."

Place the submarines for the beginning month of the scenario in their arrival locations, Transit side up. Place all the Wolfpack and Submarine Tender markers aside as these will not come into play until later in the game. Next, sort out the markers, TDC markers, Super Skippers and finally the Japanese ships marked with either the Japanese naval ensign or the Japanese national ensign. The Japanese ships will be distributed among four cups in a "War Mix."

[3.1] The "War Mix"

The "War Mix" is the distribution of the Japanese ships into four opaque cups designated A, B, C, and D. The player should sort the Japanese ships by type and tonnage and then consult the "War Mix" Table.

[3.11] The "War Mix" Table is divided into the four War Periods, with an extra column for the bonus 1932 campaign. Inside each War Period is a column for the four cups. Along the left side of the table are the Japanese ship categories. Choose the columns for the War Period noted in the scenario and sort the Japanese pieces into each cup as per the Table. If a ship category (such as M 7k tons or more) has different types of pieces, choose and distribute them randomly into the cups. The type of flag on the unit makes no difference and such units (For example, a CL with a naval ensign and a CL with a "red ball" flag) are distributed randomly. The flags are meant to apply some fog of war in that you can rarely be certain of what you see through the periscope.

[3.12] Nine Japanese ship pieces have Entry Dates printed on them. These ships should not be placed into the War Mix cups until their date of entry into the war. These ships are BB Yamato (5/'42), BV 36t (10/'43), CV Taiho (3/'44), CV Shinano (11/'44) and the five Matsu class destroyer escorts (3/'44).

[3.13] If any of the italicized Japanese units are noted as sunk at the beginning of a scenario, their pieces are not placed in the War Mix. They are removed from the game and not replaced.

[3.14] It is suggested that the War Mix be re-shuffled every two months, to avoid the player remembering what units are in which cup. Additionally, the War Mix is re-shuffled as per the War Mix Table any time the War Period advances [17.1].

[3.2] Marker Set Up

Place the Tonnage, Ships Sunk, and Submarines Lost markers in the appropriate boxes on the Tonnage & Ships Sunk / Submarines Lost Track, and the Torpedo, Month, Week, Year, and War Progress markers in their respective boxes according to the scenario. The game is now ready to begin.

[4.0] SEQUENCE OF PLAY

Silent War is played in Game Turns representing one week of actual time. Each game turn contains Segments and each Segment contains Phases. The following sequence of play is for the operational and campaign scenarios. For patrol scenarios, ignore the Strategic and Triple-R segments except for the Prep for Operations Phase [11.0].

Note: The organization of the rules generally follows the sequence of play. The section numbers of the segments begin with "5.0" as that is the rules section covering that segment.

I. STRATEGIC SEGMENT

5.0 War Event Phase
Roll a d10; if result is 0-3, reroll on War Events Table and implement the results.

6.0 Torpedo Improvement Phase
Roll d10 on Torpedo Improvement Table. If result = or > than Ships Sunk #, move the torpedo marker one column to the right.

7.0 ULTRA Phase
Roll d10 on ULTRA Table, noting drms. Mark ULTRA Areas: add one (+1) to Area Activity Chart rolls and draw one (1) extra ship from each cup.

II. TRIPLE 'R' SEGMENT
(Reinforcement, Ready, Repair)

8.0 Submarine Reinforcement Phase
Consult the Master Submarine Reinforcement List. Place and remove submarines as appropriate.

9.0 Ready Submarines Phase (at bases and sub tenders)
Move subs in the Pierside Box to the Ready for Sea Box. Roll for subs in Broom Box to ready them: roll = or < than Ready # to place in Ready for Sea Box; if roll is > than Ready # place in Pierside Box.

10.0 Submarine Repair Phase (at bases)
Roll = or < than # in Repair Box to move sub to next box (3-to-2-to-1-to-Broom).

11.0 Prep For Operations Phase
Move all submarines from "Done" section of OpArea to "Operating" section.

III. OPERATIONS SEGMENT
(Conduct individually for each Sub)

12.0 Patrol Movement Phase
Subs currently deployed with their Patrol side up may move to the "Operating" section of an adjacent OpArea or Special Mission Zone if currently active. Roll for a Transit Event.

13.0 Search and Contact Phase
Follow Search and Contact on-map instructions (with +1 drm for ULTRA, +2 DRM for a barrier wolfpack, etc).

© 2012 Compass Games, LLC

14.0 Combat Phase
- 14.1 First Attack Round
- 14.2 Counterattack Round
- 14.3 Withdrawal (Proceed to 14.4 *or* 14.5)
- 14.4 Re-Attack Rounds (Optional, followed by Withdrawal)
- 14.5 Super Skipper Determination
- 14.6 Sub vs. Sub Combat
- 14.7 Check Endurance

15.0 Transit Movement Phase

Submarines that are in the Ready for Sea Box of a base, are outbound to a patrol area, or are in the Operating section of an OpArea and have an RTB marker may move a number of OpAreas up to their movement rating. Roll for a Transit Event if applicable. Place submarine in "Done" section of OpArea Patrol side up if it intends to patrol there next turn or Transit side up if it intends to continue on to another OpArea or Base.

IV. END TURN SEGMENT
(After all subs have conducted movement and combat)

16.0 Conclude Turn Phase

Remove Spotted markers from subs on roll of 0-6; Automatically remove Spotted markers upon return to Base. Check Scenario Victory Conditions. Advance Date markers.

17.0 War Progress Phase

Check War Period Transition Table. If month has a number, roll d10; if result = or > than #, advance War Period.

[5.0] WAR EVENT PHASE

At the start of each turn, the player rolls one die. If the die roll is 0, 1, 2, or 3, the player rolls again on the War Events Table and follows the event's instructions.

[5.1] Some events are one-time only events (such as the fall of Manila). Once these have occurred, they cannot occur again. Treat any further rolls of those events as No Event.

[5.2] Some War Events direct the player to deploy a certain number of submarines to a Special Mission Zone for the turn. These submarines utilize Patrol Movement to enter the SMZ. If the player does not have enough submarines able to enter the zone via Patrol Movement (see [12.0]), non-RTB submarines that are Transit side up in or adjacent to an OpArea with the SMZ must be flipped to their Patrol side and moved into the SMZ.

(*Note: this is the ONLY time a Transit side submarine may be flipped to Patrol side at the beginning of the turn, before combat*).

If the player still does not have enough submarines to fulfill the conditions of the War Event, there is no penalty, but the player must move as many submarines as possible up to the number indicated.

[6.0] TORPEDO IMPROVEMENT PHASE

COMMENTARY

The Mark XIV Torpedo, which the Americans went to war with, was the product of the Newport Torpedo Station, a U.S. Navy Bureau. In an appalling example of elitist arrogance, this Bureau obstinately refused to acknowledge the truth of the many complaints from experienced combat submariners that the Mark XIV was not working properly. Instead, they accused the skippers of "improperly" setting the weapon.

However, careful experiments in July of 1942 in Australia, and the intercession of Admiral King himself, finally moved the Newport Torpedo Station to act. Still, it was not until fully a year later that the Mk-XIV was operating the way it was intended to, 21 months after the start of the war.

The Mk-XIV (also representing the Mk-X used by S-boats and the late war Mk-XVIII electric) torpedo marker begins the game on the Current Torpedo Value track according to the scenario instructions. This table lists ships sunk in tens and a series of die rolls. During the Torpedo Improvement Phase of the turn immediately following a turn when the current number of ships sunk reaches or exceeds one of the listed numbers of ships sunk, the player rolls a d10. If the die roll equals or exceeds the result listed for that number of ships sunk, the torpedo marker is immediately advanced indicating a fix to the torpedo problem. If the die roll is less than the result there is no change, and another roll may not be attempted until the next listed number of ships sunk is reached.

Example: In 1942 the player sinks seventy ships. He is now eligible to attempt torpedo improvement from –2 to –1. The die roll is '6' indicating that no improvement is made (a '9' is required). The player may not roll again until seventy-five ships have been sunk, and a result of '8' or '9' will result in the improvement to –1.

[7.0] THE ULTRA PHASE

COMMENTARY

Ultra was the name of the American cipher project that broke and read the German codes. Magic read the Japanese Navy Codes but the output of their combined efforts came to be known as "ULTRAs". Throughout the war, the Ultras provided the Submarine arm with dramatically accurate information on Japanese convoy movements. Early lack of success was not due to failing to be "at the right place at the right time" but rather having defective torpedoes that failed to run at the correct depth and explode as designed. In all ways, the Ultra War was a stunning success. In an odd way, it was also a tribute to the Japanese naval planners that they could schedule and run convoys on such tight schedules — an accomplishment that ultimately proved fatal.

PROCEDURE

At the start of each turn, the player should consult the ULTRA Table by rolling a die and finding the result under the current War Period. Place an ULTRA marker in each of the listed Areas. All die rolls on the Area Activity Charts in these Areas are increased by one (+1). All numbers from the Engagement Table (the numbers placed in columns A, B, C, and D) are increased by one except for those cups indicating "no draw".

[7.1] When the Sea of Japan OpArea contains an ULTRA marker, Transit Event Check die rolls are subject to a one (+1) modifier instead of the normal two (+2) modifier.

[7.2] ULTRA Areas only last for one turn. New ULTRA Areas will be rolled at the beginning of each turn.

© 2012 Compass Games, LLC

[7.3] There may never be more than three (3) ULTRA Areas in existence during any one turn. If two rolls are made due to a War Event, take the Areas in order they are received, top to bottom.

Example: In War Period 3, a War Event calls for rolling twice on the ULTRA table. The player rolls a '2' followed by a '4'. ULTRA markers are placed on the Empire Pacific, Bismarck Sea, and the Kuriles. A marker is not placed in the Carolines.

[7.4] Submarines are never required to respond to ULTRA information. The decision to Patrol Move and take advantage of the target-rich environment is up to the player and should be balanced by the risks associated with Patrol Movement (see [12.0]).

[8.0] SUBMARINE REINFORCEMENTS PHASE

COMMENTARY

The United States quickly began a massive program of building submarines using both coastal and Great Lakes yards. New construction poured into the Pacific at an amazing rate. Not only did new submarines appear, but nearly every submarine through the Gato class received a major overhaul during the course of the war. Many overhauls repaired major battle damage that was beyond the capabilities of Pacific bases; in some cases replacing defective main diesel engines or rebuilding entire conning towers. While overhauls do not alter a submarine's ratings, they do represent a major logistics impact to operations and therefore are included as part of the game.

Players consult the Master Submarine Reinforcements list. There are four categories of units listed:

A. Additions to War Mix: Japanese units with entry dates are added to the War Mix as per the War Mix Table.

B. Reinforcements: Newly received submarines are listed along with their base of arrival. Place them in the Broom Box of the proper Base display. If a base of arrival is not yet active or has fallen, the submarines are received at Pearl Harbor (*Exception: Brisbane subs are received at Fremantle if the latter is active*).

C. Withdrawals: Submarines are withdrawn for overhaul at one of the yards on the West coast of the United States. These submarines are preceded by "Withdraw", and are removed from play immediately, even if at sea and/or damaged. Place them in the "West Coast" Box on the map. Any Super Skipper stays with the boat, and any damaged/spotted markers are removed. If the submarine has been sunk, no other submarine takes its place. While in overhaul, a submarine cannot be removed from play via the War Event "Relegation to Training Duty".

D. Returns: After a number of months, the submarines in overhaul are returned to service. These are preceded by "Return" in the list. All returning submarines are placed in the Broom Box of Pearl Harbor unless otherwise noted.

[9.0] READYING SUBMARINES FOR SEA PHASE

COMMENTARY

Prior to deploying to sea, a submarine must be "readied". This represents provisioning and fueling, as well as assembling and training the crew. The latter evolution (to use the Navy term for an activity) can be somewhat indeterminate in length of time it takes. The average Pacific submarine was able to perform a turn around between patrols in a week. Sometimes it took two. The older, "creakier" boats took a little more effort to ready for sea than their brand new war construction sisters.

PROCEDURE

Move all submarines in the Pier Side Box of a Base (Shipside Box of a Tender), to the Ready for Sea Box. For each submarine starting in the Broom Box, roll a die. If the result is equal to or less than (= or <) the "Readiness" rating, the submarine is moved to the Ready for Sea Box of the Base display. If the roll is greater than the rating, the submarine is moved to the Pier Side Box on the Base display, where it will be automatically ready for sea in the following turn.

[10.0] REPAIR PHASE

Submarines with a damaged marker may be repaired at a Base. There are four boxes within the Repair Box in each Base display, a "Hold", "3", "2", and " 1" box. In each of the "3", "2", and " 1" boxes, a Repair Number is printed.

REPAIR PROCEDURE

Roll a die for each submarine in a Repair Box, starting with the submarines in Repair Box 1 and advancing one box at a time to the Hold Box. If the result is equal to or less than (= or <) that box's Repair number, advance the submarine to the next box. A submarine in box "1" advances into the Broom Box.

[10.1] The Base Max Repair Capacity is the total number of submarines that may be in boxes " 1", "2", and "3" at any one time. A submarine with damage may not be advanced into the repair process unless there is room for it.

[10.2] If a submarine receives damage of one (1) or more, and the Base is already at its Max Repair Capacity (the total number of submarines that may be in boxes " 1", "2", and "3" at any one time), any submarines in excess must be placed in the "Hold Box". Which submarine(s) go in the Hold Box is up to the player, but it usually makes sense to repair a sub with less damage first, shunting a more damaged sub into the Hold Box even if it arrived earlier.

[10.21] When submarines are repaired and there is room for more to be repaired, submarines may be advanced from the Hold Box into the "3" box (regardless of the actual damage it suffered-it is assumed to have deteriorated from waiting in the holding basin), but must wait until the following turn to roll for repair.

Note: Players should carefully plan for the return of damaged subs to avoid the holding basin penalty. For example, subs operating out of Pearl Harbor can "bounce" to Australia if needed.

[10.3] Submarines waiting in a Repair Box may not leave a Base. If a Base should fall with a submarine in a Repair Box numbered 2 or 3 or in the Hold Box, see [18.3].

[11.0] PREP FOR OPERATIONS PHASE

All submarines at sea are moved from the "Done" section of their OpArea to the "Operating" section.

© 2012 Compass Games, LLC

[12.0] PATROL MOVEMENT PHASE

Normally when on patrol, submarines tend to remain in a single OpArea. However, the player may change their patrol area to an adjacent OpArea using Patrol Movement. To use Patrol Movement, a submarine is simply moved to any adjacent OpArea, so long as that OpArea does not place the submarine further from a Base than its Range rating. A roll is made for a Transit Event (see [19.1]). If an RTB result is obtained, flip the submarine to its Transit side and place an RTB marker on it.

[12.1] If a Special Mission Zone has been activated by a War Event, a submarine may enter it using Patrol Movement for no additional movement cost. A roll is made for a Transit Event (see [19.2]).

Example: A Special Mission Event has occurred for a Guadalcanal Patrol. A submarine on patrol in the Coral Sea may Patrol Move to the Solomons, and then enter the Guadalcanal Special Mission Zone for no additional cost, rolling for a Transit Event using the Solomons Area Activity Chart.

[12.2] Submarines may not use Patrol Movement to enter or depart a submarine base.

[13.0] SEARCH AND CONTACT PHASE

COMMENTARY
Submarine combat is essentially sorting through the available contacts and determining quickly the best opportunities for sinking selected ships. Information is usually imperfect, time short, angles and opportunities limited. Within these bounds, a submarine commander must make his decisions such that the best opportunity to inflict damage is taken.

[13.1] Activity Determination Step

A submarine may choose to bypass the Search and Contact Procedure in order to not engage in combat. Such a submarine is spending most of its time submerged and/or avoiding surface traffic. If the player chooses this option, remove any Spotted marker from the submarine and proceed directly to the Endurance Phase [14.7] with a –1 modifier to the Endurance roll.

The player may also decide in this step to voluntarily RTB the submarine. If so, place an RTB marker on the submarine, skip directly to the Transit Movement Phase [15.0] and move the submarine towards the desired base.

Note: This is the only time a submarine can enter RTB status and conduct RTB transit movement in the same turn. If a submarine enters RTB status for reasons of combat, event, or endurance, it is placed in the DONE section of the OpArea.

[13.2] Search and Contact PROCEDURE

To determine if the submarine makes contact with the enemy and, if so, how many ships the submarine contacts, the player follows these steps:

A. Consult the Area Activity Chart in the OpArea in which the submarine is located. If the submarine is located in a Special Mission Area that has been activated by a War Event, the player consults the Area Activity Chart of the OpArea from which the submarine entered the Special Mission Zone. If there are any colored boxes in the row for the current war period, the player owning the submarine rolls a die, adding the following cumulative modifiers:

- +1 if this is an ULTRA area (see [7.0]).
- +2 if rolling for a Barrier deployed wolfpack.
- –1 if the submarine is Spotted and it is War Period 1 or 2.

The color of the box result determines the Activity Level:

White - no contact (see first bullet below)
Green - contact with a very small number of enemy ships
Orange - contact with a small number of enemy ships
Blue - contact with a moderate number of enemy ships
Red - contact with a large number of enemy ships

If neither of the below is the case, proceed to Step B:

- If the die roll is a zero, the box is white, and the row has at least one colored box, the player rolls a second die. If this is also a zero, the player submarine has encountered an enemy submarine. Proceed to the Sub vs. Sub Combat segment [14.6].
- If there is no contact, proceed directly to the Endurance Phase [14.7] with a –1 modifier to the Endurance roll.

B. Once enemy ships have been contacted, the player rolls on the Contact Table (left side of map), again first determining the War Period, and then rolling a die. The result is either: C1 - small convoy, C2 - large convoy; or TF - a naval task force.

C. The Player consults the Engagement Table, cross-referencing the Activity Level from the Area Activity Chart die roll with the Contact result from the Contact Table. The Engagement Table will direct the player to randomly select a number of pieces from each of the four prepared 'War Mix' cups, A, B, C, or D. Pieces are drawn from the cup (without examining them) and placed face down on the Combat Display in the column corresponding to their cup.

If the OpArea has an ULTRA marker (see [7.0]), the number of pieces per cup is increased by one unless the result for that cup was "no draw".

[14.0] COMBAT PHASE

The player now engages the Japanese convoy or task force in a series of attack rounds.

[14.1] First Attack Round PROCEDURE

[14.11] Place the submarine in one of the submarine boxes on the Combat Display. No more than one submarine may be placed in each box. See also [24.5] Wolfpacks and Combat.

[14.12] The player reveals a number of Japanese units on the Combat Display equal to the Tactical Rating of the submarine by turning them face up, *one at a time*. The ships the player chooses to reveal must be from either the column the submarine is in, or from an adjacent one on the Combat Display.

- If a "Combat Event" marker is revealed, the event is immediately resolved as per the Events instructions (see [19.2]). If any additional Combat Event markers are drawn during an attack round, they are returned to the cup.
- If a "Diligent Escort" is revealed, the player rolls immediately on the Diligent Escort row of the Counterattack Table, applying any result. Combat then proceeds normally with the Diligent

© 2012 Compass Games, LLC

Escort in its place, face up, in the proper column. If the submarine is damaged, the player may choose to withdraw from combat at this point, proceeding to the Endurance Phase [14.7].

If the year is 1943-45, the submarine is equipped with radar and may "unflip" any one Japanese unit unless it is a Combat Event, Diligent Escort, or an Aircraft. The choice to "unflip" the unit must be made immediately, before any other units are revealed. If a unit is "unflipped", another unit must be revealed in its place.

[14.13] The player utilizes the Tactical Rating of the submarine to determine the number of "TDC" (Target Data Computer) pieces that are randomly selected from the pool of face down TDC markers. The player places TDC markers (without examining them), one per target, on any of the revealed **OR** face down Japanese ships in the same column containing the submarine or in an adjacent column. Once they are all placed, TDC markers may not be moved.

[14.14] The player reveals the TDC markers and selects targets for attack. A target must be a unit with a TDC marker on it. The player may select as many targets as he can allocate the submarine's attack value to, with a minimum of one (1). The total of all attacks may not exceed the attack value of the attacking submarine. A submarine can only attack targets that are in the same or an adjacent column.

Example: USS Spearfish (6-3-4) has Whitaker (+1) as her super skipper and is in combat against two 2-0, one 1-0 cargo ship, and one revealed 7-1 destroyer. One of the 2-0 cargo ships has a TDC value of –2 but is in an adjacent column, the other, a TDC value of +1. The 1-0 cargo ship has a TDC value of 0. The player assigns 3 attack points to the first cargo maru and 3 attack points to the third maru. He does not target the second target or the escort. Total attack points assigned: 6.

Once all the targets have been selected, any unrevealed Japanese unit that is being targeted is now turned face up. If a Japanese aircraft or Combat Event marker is revealed, remove the TDC marker from it. Attack points allocated to the aircraft or Combat Event marker may be reallocated to any other unit with a TDC marker on it.

- If a Combat Event marker is revealed, the event is immediately resolved as per the Events instructions (see [19.2]). If any additional Combat Event markers are drawn during an attack round, they are returned to the cup.
- If a Diligent Escort is revealed, the player rolls immediately on the Diligent Escort row of the Counterattack Table, applying any result. Combat then proceeds normally with the Diligent Escort in its place, face up, in the proper column. If the submarine is damaged, the player may NOT choose to withdraw from combat at this point.

[14.15] Each attack is resolved separately. The following procedure (steps a through d) is used for each attack:

A. Total the following for the attacking submarine:

1. The portion of the submarine's Attack Value allocated to this target.
2. The value of a Super Skipper marker assigned to this submarine (if any). Each attack gets this bonus.
3. The current Mk-XIV torpedo value (Remember, adding a negative number is the same as subtracting it.)

B. Total the following for the target:

1. The target's Defense Value.
2. The ASW value of all *revealed* Japanese vessels in the submarine's column and adjacent columns, and the ASW value of all revealed aircraft regardless of column.
3. The TDC marker value (Remember, adding a negative number is the same as subtracting it.)
4. If the target ship is not in the same column as the submarine, add one (+1). *Note: there is a maximum of two submarines per column.*
5. If the target ship has a Damage marker subtract one (-1).

C. Subtract the target's value from the attacker's value (round down) to get a result and roll a die. If the roll is equal to or less than the result (difference), the target has been hit.

Example: Continuing from the Spearfish example above with a current Mark XIV torpedo value of minus (–1). The player calculates the following attacks:

Assuming Cargo Ship #1 is 2-0, Adjacent Column:

a) 3 attack points + 1 super skipper point + torpedo value –1, for a total of (3+1+[-1]) = +3.
b) 2 defense points + 1 revealed escort + TDC –2, +1 for being in an adjacent column for a total of (2+1+[-2]+1) = +2
c) The player must roll equal to or less than (3-2) = 1 to hit this target. (20% chance of hit)

Assuming Cargo Ship #3 is 1-0, Same Column:

a) 3 attack points + 1 super skipper point + torpedo value –1 for a total of (3+1+[-1]) = +3.
b) 1 defense point + 1 revealed escort + TDC +1 for a total of (1+1+1) = +3
c) The player must roll equal to or less than (3-3) = 0 to hit this target (10% chance of hit).

D. If the target is hit, consult the Attack Results Table. Find the size of the target in tonnage in the left column and roll a die, adding the current value of the Mk-XIV torpedo (adding a negative number results in subtraction).

- If the modified result falls into the orange results, the target has been damaged. Place a Damage marker on the vessel. If the target already had a Damage marker, it is sunk.
- If the result falls into the red results, the target has been sunk. Advance the Ships Sunk marker by one and the Tonnage Sunk marker(s) by the tonnage size.

Note: The torpedo value counts for or against the player twice: First, in terms of hitting the target (running at the proper (or not) depth), and second, in terms of detonating correctly (in terms of the magnetic exploder that was so problematic or the defective contact exploders.)

[14.16] There will be times when it is not possible for a submarine to hit a target, through a combination of low attack factors, low torpedo rating, adverse TDC modifiers, and/or high escort values. In such cases follow these guidelines:

A. If no successful attack can be made in the first attack round, there is no Counterattack [14.2]. The player may withdraw [14.3] or conduct a Re-Attack round [14.4] normally.

© 2012 Compass Games, LLC

B. If no successful attack can be made in a Re-Attack round, a counterattack round is conducted normally regardless of whether an attack is made in the first attack round.

Note: Unrevealed units with TDC markers are considered to have a defense of '1' until revealed. If attacked, and it is determined that the target cannot be hit, the attack goes through with an automatic miss, followed by a counterattack.

[14.2] Counterattack Round

Counterattack normally occurs after an attacking submarine has conducted combat against surface ships, but under certain circumstances, Counterattack may occur before and after the submarine has attacked surface ships.

Note: Any units sunk in the attack round before are removed prior to Counterattack.

To conduct Counterattack, use the following procedure:

A. Add the following for the Japanese:

1. The ASW value of all revealed Japanese forces (even those not attacked) in the column containing the submarine and in all adjacent columns, fractions rounded up. Remember, the ASW value of a ship with a Damage marker is zero. The ASW value of an aircraft is added regardless of the column the aircraft is in.
2. The number of red boxes for the current war period in the Area Activity Chart of the OpArea where the combat is occurring.
3. The general ASW value from the War Period display for the current war period.

B. For the submarine, add:

1. The submarine's Defense value.
2. The value of a Super Skipper marker assigned to this submarine (if any).

C. Subtract the submarine's result from the Japanese result and locate the applicable row on the Counterattack Table. Roll a die and apply the following modifiers:

1. For each damage marker a submarine has, add one (+1).
2. If this Counterattack is following a Re-Attack, add one (+1).
3. If the submarine has a Spotted marker, add one (+1).

In some cases on the table, a second roll on the counterattack table is needed. Apply the results of the table immediately.

Example: Continuing from the Spearfish example above in War Period 2 in the East China Sea with a general ASW level of 1. The player calculates the following counterattack:

a) 1 revealed ASW +3 red boxes in the Area Activity Chart +1 general ASW level = +5.
b) 3 submarine defense points +1 Super Skipper = +4.
c) The player consults the '1' line of the Counterattack Table (5-4=1).

[14.3] Withdrawal

Once the Counterattack Round is over, the player may voluntarily withdraw the submarine from combat. If the player voluntarily withdraws, proceed to Super Skipper Determination (see [14.5]).

[14.4] Re-Attack Rounds

If the submarine has not been sunk, withdrawn, or forced to RTB (Return to Base), it can choose to engage the convoy or task force a second time. The TDC markers from the first round are removed and mixed back into the draw pool. Revealed Japanese units remain revealed.

PROCEDURE

Prior to Re-Attack combat, the player may re-position the submarine to an adjacent column.

The player then repeats steps [14.12] through [14.16] followed by [14.2], with the following exceptions:

A. Japanese units must be revealed in the following order (see [14.12]):

- Ships with the Rising Sun battle flag must be revealed first (if in columns eligible for revealing).
- Only when all Rising Sun flags have been revealed may a "red ball" flag be turned over.

B. If equipped with radar (1943 to 1945), the submarine may not "unflip" a Japanese unit that was revealed in the first attack round.

In the Re-Attack round, one is subtracted from every TDC marker except for any –3 markers. This represents the submarine maneuvering for a better shot.

[14.41] The first Re-Attack is at the player's option. A second Re-Attack may only occur if the player has a Super Skipper on the submarine *and* rolls equal to or less than the Super Skipper's rating.

[14.42] Once a second Re-Attack is concluded, combat ends [14.3].

[14.5] Super Skipper Determination

If the submarine has sunk three (3) or more ships totaling 16,000 or more tons during the Combat Phase, the submarine has a "Super Skipper".

- If the submarine does not already have a Super Skipper, a Super Skipper marker is randomly drawn and assigned to that submarine with the +1 side of the marker.
- If the submarine already has a +1 Super Skipper, the Skipper is flipped to the +2 side.
- If the submarine already has a +2 Super Skipper there is no additional benefit.

See SUPER SKIPPERS [25.0] for additional rules.

[14.6] Sub vs. Sub Combat

If the Search and Contact Phase resulted in an encounter with an enemy submarine, conduct the following steps:

A. If a wolfpack is involved, randomly select one of the player submarines to encounter the enemy submarine. The other submarines are not involved, though this does not affect belonging to the wolfpack.
B. Make a die roll and subtract one if the player submarine is SPOTTED and/or DAMAGED. Add one if the player submarine has radar (date is 1943-45). If the result is 0-3 the enemy has spotted the player submarine first. If the result is 4-9 the player has detected the enemy first.
C. Consult the Enemy Submarine Table [30.3] in the scenario booklet to determine what enemy submarine pieces are

© 2012 Compass Games, LLC

available based on date and OpArea. The player randomly draws one of these from a cup.

D. Place the submarine which detected the other first in the Submarine Box of any column on the Combat Display, and the detected submarine in a Target Box of the same column. Draw and reveal a TDC marker for the target submarine.
E. Conduct one attack round with the firing submarine using its full attack rating plus any Super Skipper value against the target submarine's Defense rating plus any Super Skipper value. Allied submarines use the current value of the Mk-XIV torpedo unless assigned another torpedo value by special rule (early Dutch). Japanese, German, and Italian torpedoes have a value of +1 regardless of date.
F. If the target submarine is hit, consult the 1-4 row of the Attack Results Table. If the player submarine is sunk, advance the Subs Lost marker by one. If an Axis submarine is sunk, advance the Ships Sunk marker by one and the Tonnage Sunk marker by the appropriate amount.

Sub vs. Sub Combat ends following a single combat round. There is no Counterattack or Re-Attack round.

[14.7] Endurance Check

COMMENTARY

There are four key elements to keeping a World War II warship at sea: Fuel, victuals, crew, and weapons loadout. During the Pacific War, given the small number of torpedoes carried (12 to 24), and the problems with the Mk-XIV torpedo, the most often encountered limitation was torpedo loadout.

PROCEDURE

Following a turn's combat(s) for a submarine, the player must roll a die to see if the submarine has expended its loadout of torpedoes or is running too low on fuel or other consumables. To do this, the player cross-indexes the submarine's Endurance with the current value of the Mk-XIV torpedo on the Endurance Table, and rolls a die. Subtract one from the result if the submarine elected to bypass the Search and Contact Phase (see [13.1]), or encountered no enemy contacts. Add one to the result if the submarine is damaged.

- If the result is higher than the number indicated, the submarine is marked with an RTB counter and placed in the DONE section of the OpArea.
- If the result is equal to or less than the number, place the submarine in the "Done" section of the OpArea.

[14.8] Clean-Up

Return the Japanese units and Combat Event markers to the appropriate cups. If any of the ships that are italicized on the War Mix Table (Shokaku, Taiho, Shinano, Yamato, Kaga, Asahi, Izumo, or the BV) were sunk, they are removed from the game and not placed back into the cups. Remove TDCs from the combat display and return them to the draw pool.

[15.0] TRANSIT MOVEMENT PHASE

Transit Movement is the only way a submarine may move to and from a Base. Submarines move along the light blue lines connecting the Areas. Submarines performing Transit Movement are placed on their Transit side. There are two types of Transit Movement:

- Deployment
- Return to Base (RTB)

[15.1] Deployment: From a Base to an OpArea or Base to Base

If the submarine starts the Operations Segment in the Ready for Sea Box of a Base, it can move any number of OpAreas up to its speed.

Note: departure from a permanent base to an adjacent OpArea is counted against its speed rating, while departure from a Special Mission Zone (SMZ) base to a connected OpArea is not since the SMZ is considered to be "in" the OpArea.

Perform a Transit Event roll [19.1] for the sub using the OpArea with the lowest number on the line for the current War Period which contains a red box through which the submarine moved. Do not use the OpArea from which the submarine started. If the submarine survives undamaged, place it in the "Done" section of the ending OpArea. The player places the submarine Transit side up if it intends to transit further next turn, or Patrol side up if it intends to patrol next turn. Once in patrol status a submarine may never enter transit status again unless it is returning to base.

[15.11] In the following turn(s), a Transit side up submarine repeats transit movement (and Transit Event roll). A submarine may never move farther from an active base than its range value.

[15.2] Return to Base (RTB): From an OpArea to a Base.

Submarines may conduct RTB movement voluntarily or as a Combat or Transit Event result. Such a submarine is marked with an RTB marker and can never return to patrol status without readying at a Base.

[15.21] Submarines may choose to RTB by skipping the Search and Contact, and Combat Phases. Such a submarine is moved via OpAreas to the Broom Box of the Base (see also [18.0] Damage and [21.0] Bases). Perform a Transit Event roll for the sub using the OpArea with the lowest number on the Area Activity Chart with red boxes.

- If the submarine is moving from an OpArea to an adjacent Base (such as from the Hawaiian Islands to Pearl Harbor), no Transit Event roll is made.
- If the submarine cannot return to base in one move, it is left in the "Done" section of the closest OpArea to the base that it can reach. During the Transit Movement Phase of the following turn(s), the submarine repeats Transit Movement until it can be moved to the Broom Box of the destination Base. Conduct applicable Transit Events.

[15.22] A submarine may be forced to RTB by a Transit Event, Combat, or by the Endurance Table. Submarines forced to RTB are flipped to their Transit side and an RTB marker is placed on them. They are placed in the DONE section of the current OpArea and in the following turn they must conduct transit movement to any base within range. If undamaged, the submarine is placed in the Broom Box. If damaged, it must determine the level of damage before being placed in a Repair Box. (See 18.0 Damaged Submarines).

[15.23] Dutch Harbor

Operations out of Dutch Harbor were extremely difficult on submarines and crew. Frigid temperatures resulted in extended repairs and increased wear on machinery. Turnarounds on submarine deployments sometimes exceeded a month. As a result, any undamaged submarine which RTBs to Dutch Harbor must make a roll on the Damage Table. Any results of Repair 2 or Repair 3 are changed to Repair 1.

© 2012 Compass Games, LLC

[15.24] Cautious Transit
A submarine that is Transit side up may choose to move a single OpArea instead of at a higher speed in order to reduce vulnerability to patrolling ASW assets. If a submarine chooses to move one OpArea, subtract one from the Transit Event check [19.1].

[15.25] Submarines Beyond the Range of a Base
Submarines may not move beyond their range (in OpAreas) to a base. However, some events may precipitate a submarine being out of range of a base (such as the fall of a base during the early war period). A submarine that is discovered to be out of range of any base is immediately damaged and must RTB to the nearest base using normal transit movement at a speed one (1) less than its printed speed (but never less than one (1)). The crew is operating the boat using long range cruise endurance methods such as single engine, slow speeds, and such.

[16.0] CONCLUDE TURN PHASE

[16.1] Check Victory Conditions
Check victory conditions for victory or defeat. If either is achieved, play ends immediately.

[16.2] Spotted Marker Removal
Roll a die for every submarine at sea with a Spotted marker on it, and subtract the rating of the sub's Super Skipper if it has one. On a die roll of 0 through 6, remove the Spotted marker. On a die roll of 7 through 9, the submarine remains spotted. Only one roll is made for a spotted wolfpack, and the entire pack either remains spotted or has the markers removed.

[16.3] Upon entry to a Base, any Spotted marker a submarine has is removed.

[16.4] Remove ULTRA marker(s) from the map.

[16.5] Advance the Week marker, and the Month/Year markers if needed.

[17.0] WAR PROGRESS PHASE

COMMENTARY
Almost every historian agrees that, ultimately, Japan would have been defeated. Silent War assumes the inevitable defeat of Japan as a key underlying component to the game system. The game scenarios portray the Pacific War in four distinct periods: W1—Pearl Harbor to Midway, W2—Midway to the End of the Solomons Campaign, W3—Solomons Campaign to Leyte Gulf, W4—Leyte Gulf to Tokyo Bay. The periods however, will not follow the historical dates precisely. While some of this is arbitrary, it is felt that these time frames roughly parallel the change in Japanese naval and shipping movements upon which the Area Activity Charts and Search and Contact processes are based.

[17.1] PROCEDURE
The War Period marker begins the game set on the War Period Track, according to the scenario instructions. At the beginning of months marked with numbers in their boxes on the War Period Transition Table, the player may determine if the War Period advances. Conduct the following steps:

A. Consult the "War Period Modification Table". Ships & Tonnage Sunk totals can advance the progress of the war or retard it. Under the section for the next war period, cross-index the Ships Sunk and the Tonnage Sunk to determine the modification, rounding DOWN unless already at the lowest level. This will give the player a modifier for use in the next step.
B. Consult the "War Period Transition Table" and roll a die, adding the Step A modifier. If the result is equal to or greater (= or >) than the number in the box, the War Period advances.
C. If the War Period fails to advance, another attempt may not be made until the beginning of the following month.

[17.2] Automatic Advance
If the War Period has not advanced by the time all numbers for transition have been attempted (November, 1942 for example), the War Period advances automatically.

[18.0] DAMAGED SUBMARINES

Submarines may be "damaged" during Transit Events or during combat. If damaged, a Damage marker is placed on the submarine. The actual level of damage is determined when the submarine reaches a base.

[18.1] Should a submarine receive a second Damage marker, a die is rolled:

- If the die result is greater than (>) the Defense rating of the submarine, it is sunk. Advance the Submarines Sunk marker by one (1).
- If the sub is not sunk, place a second Damage marker on the sub. When the sub reaches base, determine its damage level (see 10.0 Repair Phase) by rolling twice on the Damage Table and adding the resulting Repair Box numbers. If the total damage of the sub would place it beyond Repair Box "3", then the submarine is considered a "constructive total loss." It is removed from play but it *does not* count against the submarines sunk.

[18.2] Should a submarine receive a third Damage marker, it is sunk. Advance the Submarines Sunk marker by one (1).

[18.3] Damaged submarines that reach base must roll one die on the Damage Table. The results of this die roll either place the submarine in one of the Repair Boxes or into the Broom Box. Damaged Submarines may not depart a major base once they have arrived. In the cases of Manila and Surabaya, any damaged submarines in the Repair Boxes 2 or 3 or in the Hold Box when the base falls are scuttled and considered a "constructive total loss." Do not advance the Lost Submarine marker. Submarines in Repair Box 1 may limp out to sea. They receive a Damage marker and must RTB to the nearest base. They roll again on the Damage Table when arriving at their new base, though a result of "Superficial Damage" is considered to be "Light Damage", placing them in Repair Box 1.

[18.4] The player may "decommission" a badly damaged submarine that the player does not want to repair at any time while on the repair track. The submarine is removed from the game but is not counted as "lost." If the submarine has a Super Skipper, determine if he is assigned another submarine as per [25.3].

© 2012 Compass Games, LLC

[18.5] Damaged Surface Ships

Surface ships can be damaged as a result of submarine attack. The ASW value of a ship with a Damage marker is zero (0), and a negative one (-1) modifier is applied to the target value during the Combat Phase. If a damaged surface ship survives all combat (that is, it is not sunk), then the damage has no further effect. Remove the Damage marker; the ship is assumed to have made it to port.

[19.0] EVENTS

COMMENTARY

For good or bad, combat, whether between divisions, brigades, ships, or aircraft, is governed by that intangible element called fate. Submarine warfare is particularly susceptible to it. Napoleon, the master opportunist, was once asked if given the choice of choosing between a good general or a lucky general who would he take? Le Tondue replied, "L'on fortuné, chaque temps!"— The lucky one, every time! Admirals Christie and Lockwood would no doubt have agreed wholeheartedly with him.

At various times throughout the game, events will be summoned by the game system. Players must immediately resolve these events as they have immediate consequences for the submarine(s). There are two types of events, Transit Events and Combat Events.

[19.1] Transit Events

Transit Events reflect instances where submarines were spotted and attacked before they were aware of the attacker's presence, or the loss of a submarine due to "causes unknown". These could include being torpedoed by a Japanese submarine, attacked by an aircraft, striking a mine, or simply accidental loss such as a battery explosion, or a catastrophic mechanical failure. A Transit Event check occurs during Transit and Patrol Movement any time a submarine enters an OpArea or SMZ.

PROCEDURE

Every time a submarine completes a Transit or Patrol Movement, the player performs a Transit Event check. The Transit Event is based on the governing OpArea. The governing OpArea is determined in the following manner:

- For Patrol Movement, use the OpArea the submarine has moved into.
- For a Special Mission Zone, use the OpArea from which the submarine entered the Special Mission Zone.
- For Transit Movement, use the OpArea with the lowest number on the line for the current War Period which contains a red box through which the submarine moved. Do not use the OpArea from which the submarine started.

Roll a die for the submarine and apply the following cumulative modifiers:

- Subtract one if the submarine is Transit side up (i.e. not performing Patrol Movement).
- Subtract one if the submarine is conducting Cautious Transit [15.24].
- Subtract one if the submarine is a member of a wolfpack [24.4].
- Add one if the submarine is Spotted during War Periods 1 and 2 [23.0].
- Add two if the submarine is entering a Special Mission Zone (SMZ), see [20.3], or if entering/leaving the Sea of Japan [7.1].
- Add one or more for Congregating Risk [22.1].

If the die roll equals or exceeds (= or >) the number at which red results start, the player has encountered a Transit Event. The player now rolls again twice on the Transit Event Table (located on map) to find the row and column, and cross-references the result. The result is applied immediately.

[19.11] If a submarine receives an RTB result, the submarine is placed in the DONE section of the OpArea used to determine the Transit Event check, even if already conducting RTB movement. If more than one OpArea could have been used (lowest number on the Area Activity Chart which contains a red box is the same), the submarine is placed in whichever OpArea the player decides.

[19.2] Combat Events

Each cup contains one chit marked "Combat Event." When an Event chit is revealed, play is momentarily stopped and the Event is immediately resolved. The results of the Event supercede the rules in all cases.

PROCEDURE

Upon revealing an Event chit, roll a die and consult the Combat Event table below. Implement the effects listed. The Event is applicable to a single attack round, and only one Event can occur per attack round.

COMBAT EVENTS

Die Roll

0 *Target Lumbers into Way*

A Japanese ship suddenly crosses the path of one or more torpedoes. Conduct the Combat Phase normally, but prior to conducting the first attack round (14.15), choose any face down "red ball" flagged ship in this or an adjacent column, reveal it, and determine if it is sunk. To do this, roll a die and add the current torpedo modifier on the correct target size line of the Attack Results Table. Continue the attack round normally. If no eligible ships are on the display, ignore this Event.

1 *Surface Gunnery Combat*

The submarine surfaces to engage in gun combat. Conduct the Combat Phase normally but instead of the attack round perform the following: 1) Place a Spotted marker on the submarine. 2) Choose any revealed Japanese merchant/transport piece in this column and attack it using a die roll on the 26-35 line of the Attack Results Table (*Argonaut*, *Nautilus*, and *Narwhal* use the 18-25 line, *Surcouf* uses the 10-17 line, and *Leviathan* uses the 5-9 line). The value of the Mk-XIV torpedo is NOT applied to the result. If there is no revealed merchant/transport piece, or if there is a revealed IJN unit ("white" aircraft, escort, CL, BB etc or a Diligent Escort), this event is ignored. When finished, proceed to the Counterattack Round.

2 *Circular Running Torpedo*

A torpedo runs in a circle back toward the submarine. Conduct the Attack Round normally, but additionally conduct an attack on your own submarine. To conduct this attack, the player adds one to the current Mk-XIV torpedo value and a specially drawn TDC marker (adding a negative number is the same as subtracting), and rolls a die. If the die roll is equal to or less than the result, the submarine is sunk. If the submarine survives proceed to the Counterattack Round.

© 2012 Compass Games, LLC

3 *Betty Bomber Spots Submarine*

The submarine is spotted and attacked by a Japanese patrol bomber. Roll immediately on the "Event Aircraft" line of the Counterattack Table and apply the results. Proceed to the Endurance check.

4 *Mechanical Troubles End Attack*

The submarine encounters mechanical trouble. There is no Combat Phase for the submarine this turn. Roll a die:

- If an odd result, place a Damage marker and an RTB marker on the submarine;
- If an even result, the chief engineer fixes the problem and the submarine may resume normal operations next turn. (It does not have to roll on the Endurance Table for this turn.)

5 *Perfect Setup*

The submarine approach was perfect. Proceed normally except that all TDC markers for this round have negative values. (i.e., treat all "+" as "-".)

6 *Tonnage Doubled*

The skipper spots a fat target. At the end of the Combat Phase, double the tonnage of the largest merchant ship sunk.

7 *Counterattack - Combat*

The sequence of combat is altered for this round only. The escorts attack first, then, if not sunk or forced to RTB, the submarine attacks the surface ships. Conduct the initial attack round up through [14.11] thru [14.14] then skip to the Counterattack Round [14.2]. If the submarine is not sunk or forced to RTB, it may then attack normally as per [14.15]. Then skip the counterattack [14.2] since it was already conducted.

8 *Counterattack*

Escorts detect the submarine making its approach and hold it down. Resolve as per Combat Event #7 except the submarine cannot make an attack. If this event occurs to a wolfpack, and one or more of the submarines in that wolfpack have no escorts in the same or an adjacent column, those submarines may go on to attack the surface ships.

9 *Combat - Combat*

The submarine eludes all escorts and attacks the surface ships. There is no Counterattack. After the first round the Japanese force is still revealed in accordance with [14.4].

[20.0] SPECIAL MISSION ZONES (SMZs)

COMMENTARY

Often, submarines were co-opted by higher levels of command for special missions. In these cases, they were not available for normal combat operations. Fortunately, special missions tended to be of short duration and the co-opted subs were quickly returned to regular duty.

Special Mission Zones (SMZs) are the circular areas on the map without Area Activity Charts in them. These areas are where submarines carried out special missions such as covering invasions, inserting supplies and guerillas, supporting major surface battles such as searching for downed airmen, or barring enemy ship movement through a particular geographic location. These SMZs see intensive activity by enemy surface forces thus increasing both the chance to contact and engage targets, as well as increasing the danger of detection and ASW attack.

[20.1] SMZs may not be entered unless they have been activated on the War Event Table. Individual SMZs are activated by a die roll on the Table during the Strategic Segment, and are activated for only a single turn. SMZs are linked by a light blue arrowhead to one or more OpAreas. SMZs may only be entered via a linked OpArea.

[20.2] When assigned to an active SMZ, allocated submarines are exempt from Congregating Risk (see 22.0) in that OpArea.

[20.3] Immediately after arriving in an OpArea, a submarine may be repositioned to an active SMZ that is connected by a light blue arrowhead to that OpArea. If a player moves a submarine to one of the SMZs belonging to that OpArea, a Transit Event check must be performed with a die roll modifier of +2, using the Area Activity Chart of the OpArea from which the submarine entered the SMZ.

[20.4] When in a SMZ, the submarine conducts the mission given by the War Event. If it is a Search and Contact mission, use the Area Activity Chart belonging to the OpArea from which it entered into the SMZ. All die roll results on this Area Activity Chart are increased by one Activity Level. Thus, Sparse becomes Low, Low becomes Moderate, Moderate becomes High. High remains High and No Contact remains No Contact. Other results may apply as directed by the War Events Table.

[20.5] Submarines in an SMZ skip the Endurance check. Unless noted below, these submarines are marked RTB and placed in the DONE section of the OpArea from which they entered the SMZ.

[20.51] Submarines conducting the following War Events must enter RTB status and conduct transit movement in the current turn:

- Fall of Luzon
- Run to Corregidor
- Fall of the Dutch East Indies

[21.0] BASES

Bases are where submarines start and end missions (unless they are sunk during the mission). There are five major Bases in the game, PEARL HARBOR, FREMANTLE, BRISBANE, MANILA/SUBIC BAY, and DUTCH HARBOR. Major bases are represented by Base Displays on the Map. Of the major bases, only Pearl Harbor is continuously active throughout the war. The others become active and/or inactive due to a War Event as follows:

A. Manila - Active at War Start. Inactive on War Event.
B. Fremantle - Active on War Event.
C. Brisbane - Active on War Event.
D. Dutch Harbor - Active on War Event. Inactive on War Event.
E. Subic Bay - Active on War Event.

© 2012 Compass Games, LLC

[21.1] Forward Bases

The remaining bases are Forward Bases that are represented on the map by Submarine Tenders in SMZs. These bases are:

A. Surabaya - Active on War Event. Inactive on War Event.
B. Midway - Active on War Event.
C. Majuro - Active on War Event.
D. Mios Woendi - Active on War Event.
E. Saipan - Active on War Event.
F. Guam - Active on War Event.

[21.11] Once active, a Forward Base SMZ may no longer be the target of a Special Mission unless inactivated by a War Event. Submarines moving to a Forward Base do not add +2 to their Transit Event roll as per [19.1].

[21.2] Submarine Tenders

Submarine Tenders are specialized ships that support submarines in forward areas, providing fuel, torpedoes, food, and other supplies. They lacked the capabilities of a full base, but could conduct minor repairs and provided valuable service in extending the time a submarine could operate far from its home port.

[21.21] When a Forward Base is made active by the War Event Table, the player randomly selects a submarine tender and places it in the SMZ in the War Progress Phase of the turn unless otherwise noted. A tender may not be added to the draw pile until its deployment date, which is printed on both the counter and the submarine tender display.

[21.22] A submarine tender's support capacity is listed on the Submarine Tender card and on the Tender counter. This is the maximum number of submarines that can be in the tender's Broom, Shipside, and Ready for Sea Boxes at any one time. If the tender is at maximum capacity, no additional submarines may RTB to that tender.

[21.23] A damaged submarine may RTB to a Forward Base in an attempt to make minor repairs. Roll immediately on the Submarine Damage Table. If the result is 'Superficial Damage', move the submarine to the Broom Box of the appropriate tender. If any other result, move the damaged submarine to the 'Done' section of the applicable OpArea, and in subsequent turns it may only RTB to a major base.

[21.24] A submarine tender that is at a base which falls is removed from play but remains eligible to be used for a new base.

[22.0] CONGREGATING RISK

COMMENTARY
One of the greatest risks for submarines not operating as a wolfpack or assigned to special missions was congregating a great number of them in an operating area. First, the radio traffic often alerted the Japanese to increased activity, and second, the activities of one submarine might unexpectedly draw enough attention to reveal another. Just such an effort in 1942 caused a rapid rise in submarine losses prompting the shore-based commanders to stop "playing checkers" with the boats.

There is no limit on the number of submarines that may be in an OpArea. However, as the number of submarines increases, liabilities of increased submarine activity take effect.

[22.1] For each multiple of four submarines beyond the first four in an OpArea with RED or BLUE boxes in its Area Activity Chart for the current War Period, implement the following modifiers for all submarines:

A. Add one (+1) to any Transit Event die roll if the sub is passing through, arriving or departing.
B. Subtract one (-1) when searching for ships on the Area Activity Chart.

[22.2] The above modifiers are cumulative for additional multiples of four (i.e. -2 search penalty and +2 to transit roll if nine submarines in an OpArea, etc.).

[22.3] Wolfpacks and Congregating Risk

Every two (fractions rounded up) submarines in a wolfpack [24.0] count as one submarine for purposes of Congregating Risk.

[23.0] SPOTTED EFFECTS

A spotted submarine has greater difficulty locating the enemy (as the enemy is avoiding the area the reported submarine is in.) as well as experiencing an increased risk of encountering Japanese escort forces. When spotted during War Periods 1 and 2, subtract one (-1) from any rolls on the Area Activity Chart and add one (+1) on any Transit Event rolls.

Spotted submarines must also add one (+1) when rolling on the Counterattack table per [14.2].

[23.1] Additional Spotted markers have no effect. If a submarine that is already Spotted receives a Spotted result, no action is taken.

[24.0] WOLFPACKS

COMMENTARY
Despite the successful use of co-mutually operated submarines by the Germans (called wolfpacks, a term not universally adopted by U.S. submarine forces) the United States was loath at first to emulate this tactic. Various reasons are given ranging from tactical ones to psychological ones. (The United States had, after all, been brandishing the sword of indignant rage at the Germans for their unrestricted submarine warfare and for the use of "wolfpacks".) However, by the spring of 1943, Jimmy Fife, commander of submarines in Brisbane, was willing to give it a try. It would take some time for the Americans to develop the skill necessary but by mid-1944, American wolfpacks were accomplishing what the Germans could only dream of.

PROCEDURE
A Wolfpack may be only formed at a major sub Base (not a Forward Base). All units that participate in a wolfpack must start out from their Base at the same time and must arrive in the wolfpack's OpArea at the same time. All wolfpack submarines are placed under a Wolfpack marker. Submarines may leave a wolfpack at any time but once a submarine has left a wolfpack, it may not re-join it at sea later. The minimum number of submarines a wolfpack may have is three (3).

[24.1] Wolfpack Formation

Starting in October 1943, wolfpacks may be formed. The submarines chosen must all be in the Ready for Sea Box.

© 2012 Compass Games, LLC

[24.11] Prior to the Wolfpack Experience marker reaching nine (9) (See Wolfpack Experience [24.7]), the following restrictions are in effect:

A. A player may only deploy one wolfpack at a time.
B. Wolfpacks may not exceed three (3) submarines.

[24.12] The turn after the Wolfpack Experience marker reaches nine (9), the following restrictions are in effect:

A. A player may deploy up to three *w*olfpacks at a time.
B. Wolfpacks may not exceed four (4) submarines.

[24.13] The turn after the Wolfpack Experience marker reaches fifteen (15), the following restrictions are in effect:

A. A player may deploy up to five *w*olfpacks at a time.
B. Wolfpacks may not exceed six (6) submarines.

[24.14] Disbanding
A wolfpack which falls below three submarines ceases to exist at the end of the Combat Phase in which the pack fell below three. The other two (or one) submarines may continue to attack together for the current phase only. If the wolfpack falls below three members due to a Transit Event or a member failing its Endurance check, the pack is disbanded immediately.

COMMENTARY
A wolfpack is more than the sum of its parts. Although a pair of submarines operating together benefits statistically, it is not sufficient to qualify as a wolfpack for rules purposes.

[24.2] Wolfpacks and Movement

Wolfpacks follow the rules of movement except that all members of a wolfpack move together as if it were a single unit. Wolfpacks cannot transfer from Base to Base, but they may 'bounce' to a new base after spending at least one turn in 'patrol' mode.

[24.3] Wolfpack Types

COMMENTARY
American wolfpacks had the boats operate in close proximity to each other. While they covered less area, they were able to quickly deliver a coordinated attack. German wolfpacks tended to operate in a barrier fashion, often stretching in a line hundreds of miles long. This allowed the Germans to have a higher probability of detecting a convoy, but often resulted in the further boats being unable to catch it.

Wolfpacks may be deployed in an OpArea or SMZ in two ways: Group or Barrier. The player decides which type he is using prior to the Search and Contact Phase [13.0].

[24.31] Group Pack: If deployed in a Group, the pack makes a single die roll on the Area Activity Chart [13.2.A] with no modifier.

[24.32] Barrier Pack: If deployed in a Barrier, the pack makes a single die roll on the Area Activity Chart [13.2.A] with a +2 modifier. If contact is made, one randomly chosen submarine from the wolfpack is assumed to have made the contact. A separate die roll is then made for each additional submarine in the pack to determine if it is able to intercept as well. On a roll of 0-5 the submarine is able to intercept. On a roll of 6-9 the submarine is unable to intercept and is set aside (but is still in the wolfpack). At the conclusion of the turn, all surviving wolfpack submarines (including those that did not intercept) that do not have to RTB are placed in the "Done" section of the OpArea.

[24.4] Wolfpacks and Transit Events

Each submarine of a wolfpack must undergo Transit Events. Each member must roll separately for Transit Events as normal, however each wolfpack member subtracts one (-1) from the Transit Event die roll.

Should a wolfpack member encounter a Transit Event, the remaining die rolls to resolve that Transit Event are normal, unmodified rolls.

[24.41] A member of a wolfpack sustaining a RTB/DAMAGE result must drop out from the wolfpack and return to Base. This may force a wolfpack to disband. A member of a wolfpack that is sunk is removed from play.

[24.5] Wolfpacks and Combat

Wolfpacks conduct combat with all the wolfpack members on the Combat Display. The player may freely assign submarines to the columns, with no more than two subs per column.

[24.51] If a Diligent Escort counter is drawn, its attack is made on a randomly chosen submarine prior to placing it in its proper column.

[24.52] Combat Events [19.2] only apply to the submarine that reveals the event chit.

[24.53] Combat is conducted normally except as noted below. Each submarine resolves its attack and counterattack individually (one at a time). The following sequence is used:

a. Assign subs to columns.
b. Starting with the sub of your choice, reveal Japanese units per 14.12.
c. With the same sub, place TDC markers per 14.13.
d. Make the attack with that sub, utilizing the current Revealed Escort level.
e. Resolve the counterattack on that sub.
f. Return to step (b) with sub #2, and so on.

[24.54] Revealed Escort Level
Each submarine will have its own Revealed Escort level, which applies to the attack and the counterattack.

a. If a submarine has an escort in its column, the escort's ASW factor is applied to that submarine.
b. If a submarine has an escort in an adjacent column, and no submarine is in that column, the escort's ASW factor is applied to that submarine.
c. The ASW level of an aircraft is applied to all submarines regardless of column.

Note: this can result in the ASW factor of an escort vessel being applied to up to four submarines.

[24.55] Re-Attack
Wolfpacks may Re-Attack once but never twice (coordination breaks down too much). Each member of the wolfpack must successfully roll for Re-Attack. Failure of this roll results in the submarine withdrawing [14.3] from the current combat phase, but the submarine is still a member of the wolfpack.

To determine if a wolfpack can conduct a Re-Attack, roll a die for each member submarine. If the die roll is less than or equal to the tactical rating of the submarine plus any Super Skipper value, it may participate in a Re-Attack. Damaged submarines add two (+2) to this die roll.

© 2012 Compass Games, LLC

[24.6] Wolfpacks and SPOTTED Results.

Any SPOTTED result obtained by a member of a wolfpack results in all members of that wolfpack being spotted. In the Conclude Turn Phase, one die roll is made for the entire pack. If the result is removal of the spotted marker, markers are removed from all submarines in the pack. Otherwise, the entire pack remains spotted.

[24.7] Wolfpack Experience

When two or more subs in a wolfpack sink an enemy ship in any one Combat Phase [14.0], the wolfpack gains a Wolfpack Experience Point. The Wolfpack Experience marker is increased by one on the tonnage track. A wolfpack may only gain one experience point per patrol.

- When the Wolfpack Experience marker reaches nine (9), the player's ability to deploy and assign submarines to wolfpacks is improved.
- When the Wolfpack Experience marker reaches fifteen (15), the player's ability to deploy and assign submarines to wolfpacks reaches its maximum.

[25.0] SUPER SKIPPERS

COMMENTARY

In any military endeavor, there are gifted individuals who rise above their peers to achieve greatness.. The Submarine War was no exception. Legendary skippers such as Morton, O'Kane, and Klakring forever established a tradition of excellence for those who would wear silver or gold dolphins in the U.S. Navy. SILENT WAR provides twenty-four named skippers, two of which are Allied skippers, who accomplished great feats of daring. However, behind every great skipper is a skilled, dedicated crew that allows the submarine to perform as a superb engine of war.

[25.1] Super Skipper Determination [also 14.5]

If the submarine has sunk three (3) or more ships totaling 16,000 or more tons during the Combat Phase, the submarine has a "Super Skipper".

- If the submarine does not already have a Super Skipper, a Super Skipper marker is randomly drawn and assigned to that submarine with the +1 side of the marker.
- If the submarine already has a +1 Super Skipper, the Skipper is flipped to the +2 side.

If the submarine already has a +2 Super Skipper there is no additional benefit.

[25.2] The Super Skipper normally remains with one submarine and is lost if the submarine is lost.

[25.3] The only time a Super Skipper may be reassigned is if the submarine is withdrawn from service (removed as per War Event result or declared a constructive total loss (see [18.1] and [18.4] damage)). In such an event, roll a die for the Skipper. If the result is 0 thru 4, the Skipper is removed from play (re-assigned to training command, a surface warship, or transferred to the War Department). If the result is 5 thru 9, he may be assigned at the +1 level to any submarine currently in a Repair Box, or any submarine next in line to be received as a reinforcement or returning from an overhaul.

Example: In December 1943, S-42 with +2 Whitaker is withdrawn from active service. The player rolls a die and gets an 8. The player may reassign +1 Whitaker to any sub that is in a Repair Box, or to Redfin, Angler, Flasher, Robalo, Tang, Jack, or Tambor which will be received in January of 1944.

[26.0] TWO PLAYER VARIANT

COMMENTARY

Although there was one Commander of Submarines Pacific, there was, in all reality, two fully functional commands operating submarines against the Japanese; Pacific Command at Pearl Harbor, and SouthWest Pacific Command at the two Australian Bases at Fremantle and Brisbane.

It is possible to play Silent War with two players playing simultaneously, each taking one of the commands. This is not a competitive game between players- it is a cooperative one. The distribution of submarines and the variance of the Area Activity Charts coupled with the distance between the commands and the operational areas make it very hard to artificially balance the game such that two players can "compete" for tonnage. All game rules are followed normally. Both players play each turn using the submarines at their disposal. Transfers of submarines are by player agreement when not specified in the rules. A suggestion for cooperation might be: Anytime the number of submarines operating from Australia falls below thirty six, the SouthWest Pacific Commander may demand six of the newest class of submarines available to the Pearl Harbor Command. Players should otherwise balance the distribution of submarines (authorizing transfers as needed) and agree on operating areas. Players are not prohibited from both hunting in the same OpArea but Congregating Risk rules [22.0] apply.

[27.0] QUICK RESOLUTION

The quick resolution process is intended to resolve combats in an expedited manner. Players should be fully familiar with the normal combat process before using the quick resolution process. This process is valid if used on occasion, however it is not intended, nor recommended, for extensive use over a campaign as the results this table generates are approximate and over the course of a war can vary greatly from the historical results.

PROCEDURE

Proceed normally thru [13.1]. Instead of continuing to [13.2], follow the below alternate sequence:

1) Roll die twice. If 0,0 is the result, conduct Sub vs Sub combat [14.6] and do not continue this sequence.

2) Calculate the submarine's attack value by adding its attack factor, any super skipper value, and the current Mk-XIV torpedo value. Subtract one (-1) if the submarine is damaged, one (-1) if it is spotted (for a maximum possible subtraction of two (-2).

3) Determine the number of colored (non-white) boxes in the applicable war period line of the OpArea chart, and cross-index the two numbers on the **Quick Resolution Table**.

4) Roll one die subtracting one (-1) if this is an ULTRA area, one (-1) if the submarine has radar (1943-45), and

© 2012 Compass Games, LLC

one (-1) if the submarine is a member of a wolfpack (for a maximum possible subtraction of three (-3).

5) Subtract this number from the number previously found on the Quick Resolution Table. This result is the number of ships sunk.
(If the table value was 3 and the die roll was 2, then one ship is sunk)

6) Draw the first ship from Cup A, the second from Cup B, the third from Cup C, the fourth from Cup D, the fifth from Cup A, and etc. Remember which cup was the last one drawn from, and in the next combat sequence begin with the Cup following the last one.

7) All ships drawn are sunk except for Diligent Escorts.

8) If a Combat Event marker is drawn, immediately resolve it before making further draws. Disregard all events except "Circular running torpedo", "Betty Bomber spots submarine", and "Mechanical Troubles End Attack".

9) If a Diligent Escort is drawn, roll immediately on the "Diligent Escort" line of the counter-attack table.

10) If an aircraft is drawn, roll immediately on the "Event Aircraft" line of the counter-attack table.

[27.1] Quick Resolution Counter Attack

To resolve the counter-attack, roll a die, subtract one-half (fractions rounded up) of the submarine's defense value and find the colored box in the appropriate war period line of the OpArea Activity chart, applying the following results:

- If the result is a white box, the combat for the round ends.
- If the result is a green box, the submarine is spotted.
- If the result is an orange box, the submarine must RTB.
- If the result is a blue box, the submarine is damaged.
- If the result is a red box, the submarine has been sunk.

If the submarine began the combat damaged, add one (+1) to the die roll.

[28.0] RULES FROM THE IJN EXPANSION KIT.

Steel Wolves, Vol 1: The German Submarine Campaign against Britain and its Allies 1939-1943, the follow-on title to ***Silent War***, introduced several new concepts to the ***Silent War*** system. Those rules were incorporated into ***SILENT WAR: Imperial Japanese Navy, Expansion Pack 1***, and are added here for completeness. The numbering convention from ***IJN*** has been retained here for easy crossreferencing to ***IJN***.

[IJN 4.0] LONERS

Unlike the Atlantic campaign where there were a significant number of ships sailing outside of convoys (loners), the vast majority of Japanese shipping was organized into task force style convoys. However, loners did occur, especially lone warships. This rule introduces the concept of loners from ***Steel Wolves*** into ***Silent War*** apropos to the Japanese experience.

[4.1] Determining Loner Contacts

When rolling for contacts on an Area Activity Chart (AAC) War Period row in which there are red boxes and the die roll result is a white box, there is a chance of encountering a loner. On a white box result, roll again. If the second die roll result is a red box on that AAC's War Period line, a loner has been encountered.

[4.11] If the initial roll is a zero, the second roll is also used to determine if there is a Sub vs. Sub contact [SW14.6].

[4.2] Setting Up Loner Combat

Use the following procedure to set-up and conduct loner combat.

The Target
If a loner has been encountered, a single ship is drawn from one of the cups depending upon the current War Period in accordance with the following:

- **WP1**: draw from cup **A**
- **WP2**: draw from cup **B**
- **WP3**: draw from cup **C**
- **WP4**: draw from cup **D**

Place this ship in the column that is associated with the cup from which the counter was drawn (this is for the purpose of remembering which cup the playing piece came from).

Quick Resolution Table [27.0]

		Number of non-white boxes on Area Activity Chart									
		1	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**
	7	1	2	3	3	4	4	4	5	5	5
Attack factor,	**6**	1	2	2	3	3	3	4	4	4	5
+ Super Skipper,	**5**	1	2	2	2	3	3	3	4	4	4
+ Torpedo Value,	**4**	1	1	2	2	2	3	3	3	3	4
-1 if Damaged,	**3**	1	1	2	2	2	2	3	3	3	3
-1 if Spotted	**2**	1	1	1	2	2	2	2	3	3	3
= Sub Attack Value	**1**	1	1	1	2	2	2	2	2	3	3
	0	1	1	1	2	2	2	2	2	3	3

© 2012 Compass Games, LLC

The Submarine
Roll one die, subtracting any Super Skipper value from the result and compare it to the submarine's tactical rating. If the (modified) die roll is equal to or less than the submarine's tactical rating, place the submarine in the same column as the target; otherwise place it in an adjacent column.

[4.3] Resolving Loner Combat

The player reveals the target unit.

- If the revealed unit is a Combat Event, roll the die as per [SW19.2], but only apply the event if the result is 3 or 4, treating 0, 1, 2, 5, 6, 7, 8, and 9 as "no-event."
- If the revealed unit is an aircraft (not an Aircraft Capable Ship as per [IJN 3.2]), the aircraft receives a single counterattack round after which combat ends.
- If the unit is an:
  - **A)** **Merchant** (green bar on yellow) counter, proceed to the Combat Procedure below,
  - **B)** **Japanese Warship** (grey bar on white) counter or non warship **Auxiliary** (grey bar on yellow) counter follow the normal IJN Set rules above [3.1] and proceed to the Combat Procedure below.

Combat Procedure
Resolve combat normally with the exception that the player may voluntarily invoke Combat Event #1 (Surface Gunnery Combat) unless the loner is a naval unit (that is, the loner is a Japanese Warship, however non warship Auxiliaries may be attacked by surface gunnery). Re-attack rounds may be used and a Super Skipper may get an additional re-attack as per [SW14.41]. The player subtracts one (-1) on the combat Endurance Check at the end of the combat.

[IJN 5.0] CRASH DIVE!

Steel Wolves introduces crash dive rules and ratings into the ***Silent War*** game system. With this IJN expansion pack, these ratings and rules are formally added into ***Silent War***.

The Crash Dive Rating is a rating that gives a submarine a "second chance" against sudden attacks such as from patrol aircraft, diligent escorts, and malfunctioning torpedoes.

[5.1] Crash Dive Procedure

During combat resolution, if a Diligent Escort is drawn, or the Combat Events "Circular Running Torpedo" or "Betty Bomber Spots Submarine" is rolled, the submarine may attempt to evade using its Crash Dive Rating. Before resolving the escort, aircraft, or circular torpedo, the player rolls one die, subtracting any Super Skipper rating from the result and comparing the final result to the Submarine's Crash Dive Rating.

- If the result is less than or equal to the Crash Dive Rating, the crash dive is successful. Roll on the Diligent Escort or Event Aircraft Table (as applicable), but change any result except "No Effect" to "Spotted." Circular running torpedoes automatically miss a submarine that has successfully crash dived, continue with combat as normal. If diving to avoid a Betty bomber, proceed to the Endurance Check (as directed by that Combat Event).
- If the submarine fails the roll, the occurrence (escort or event) is resolved normally, and combat continues normally.

[5.2] Crash Dive Ratings

The following table provides the Crash Dive Ratings for the Allied submarines appearing in ***Silent War***.

Submarine Class	Crash Dive Rating
S1	0
S2	0
S3	0
Leviathan	**X**
B	0
Argonaut	**X**
Narwhal	**X**
Dolphin	0
Cachalot	0
P1	0
P2	0
P3	0
New S1	1
New S2	1

Submarine Class	Crash Dive Rating
T	0
Gato	0
Balao	0
Tench	0
Scheme 17	0
K-VIII	0
K-XI	0
K-XIV	0
O-16	0
O-19	0
O-21	1
British S2	1
British T2	2

X Indicates that this submarine can not utilize "Crash Dive" whereas zero "0" means that there is a 10% base chance to successfully crash dive.

[IJN 6.0] TARGETING AN ESCORT

Most successful attacks on escorts occurred when the escort was unaware of the submarine's presence until the torpedo hit (or until the torpedo track was sighted with little opportunity to react). In other words, active ASW was not occurring during the attack. The escort generally was steaming at slow speed with the convoy or task force, and perhaps changing station with eyes more interested in keeping out of the way of the bigger ships. This option allows a 10% or 20% improved chance of hitting one escort in line with historical occurrences. Nonetheless, the escort's high defense value must still be overcome and the submarine will still need a good TDC solution.

This rule applies only to the first attack round (but not the re-attack). A submarine can target one (1) escort and that escort's ASW value is not counted as part of the defense of that unit. The ASW values of any other revealed escorts ARE counted. The option may be utilized if the player fires at an unrevealed target but which later turns out to be an escort, so long as only one

© 2012 Compass Games, LLC

escort in total has its ASW value ignored. If the escort is damaged or sunk, its ASW value is not used in the counterattack round.

[6.1] Restrictions:

This option cannot be utilized if any of the following conditions exist:

- **a.** The submarine is **SPOTTED**.
- **b.** A Diligent Escort has been revealed.
- **c.** An aircraft has been revealed.
- **d.** The following Combat Events occur:
  - Betty Bomber Spots Submarine.
  - Counterattack (escorts spot submarine and hold it down).
  - Counterattack - combat (escorts attack before sub can).
- **e.** A member of a wolfpack has already attacked, alerting the escorts. Only the first member of a pack can take advantage of this benefit.

[IJN 7.0] EARLY ADVANCEMENT TO WAR PERIOD 4

The American submarine campaign was the primary contributor to the degraded ability of the Imperial forces to resist Allied advances. By 1945 imports of bauxite (for aluminum) fell by 88%, iron ore was down by 95%, wood pulp dropped 90%, cotton and wool was down by 91%, oil dropped by 92%, soda and cement fell by 96%, lumber was down 98%, and rubber by an astonishing 99%. The impacts to Japans ability to conduct the war were dramatic:

- *Aircraft engine testing fell from 8 hours and five flights per engine to 2 hours of ground testing on only 10% of all engines resulting in an increased failure rate of engines in flight and combat.*
- *By the end of 1944, 80% of each aircraft was made from substandard aluminum pilings, resulting in significantly reduced quality and strength.*
- *Lack of aviation fuel resulted in a significant decrease of pilot training.*
- *Japanese carrier pilots received inadequate training at sea in part because of the reluctance of carriers to leave port to conduct training in ever more dangerous U.S. submarine infested waters.*
- *Inability of tankers to bring fuel to naval units resulted in those units being stationed close to the fuel supply rather than at distant sites where they could be more effective in countering Allied moves.*
- *In 1944, the lack of steel forced significant cutbacks in all naval and merchant construction programs and greatly inhibited repairs on damaged units.*
- *Delivery of supplies to island garrisons fell from a 96% delivery rate in 1942 to 67% in 1944 and 51% by 1945.*

This is an adjustment to ***Silent War*** rule [SW17.1], which allows an early transition to War Period 4 in response to the player achieving greater results in earlier periods than occurred historically, enabling a more rapid Allied advance, and hastening the demise of the Japanese merchant marine. During the War Progress Phase, rather than use the numbers in the boxes on the War Period Transition Table for War Period 4 (June 44 thru Jan 45) use the following procedure:

Procedure

When both the Ships Sunk marker reaches or exceeds 860, and the Tons Sunk marker reaches or exceeds 3,800 (3.8 million) tons, the current month becomes the new first month for the transition to War Period 4 on the War Period Transition Table. The current month is now considered to have the number '9' in it (the same as the printed June of 1944 turn on the War Period Transition Table) and subsequent months on the table have the corresponding subsequent numbers in them. Once this occurs, rolling on the War Period Modification Table for War Period 4 is performed as it would normally be done.

Example: *In March of 1944 the player achieves 860 ships sunk for 3,900t. The War Period 4 transition now advances into the current month with the War Period transition number for March being '9', April is '8', May is now '7', and so on.*

[29.0] RESERVED for future game expansion.

[5.0] War Event Tables

War Period 1	
Die Roll	**Event**
0	**Special Mission: Fall of Luzon.** Three submarines must move to Davao to evacuate Allied personnel and Filipino gold reserves. No attacks may be made. All submarines currently inport Manila regardless of readiness must conduct Base-to-Base movement to Surabaya and/or Fremantle. Any subs in Repair Boxes 2 or 3 or in the Hold Box are scuttled but are not counted as sunk. Once this event occurs, Manila has fallen and no further operations may be conducted from it. Fremantle Base immediately becomes operational. Immediately place the American Submarine Tender *Holland* at Surabaya. If this Event is rolled a second time, conduct: **Special Mission: Run to Corregidor.** Two submarines must move to Davao delivering supplies and evacuating VIPs. No attacks may be made.
1	If "Fall of Luzon" (result 0) has not occurred, conduct that Event instead. If it has: **Special Mission: Fall of Dutch East Indies.** Six submarines must move to Surabaya to evacuate Allied personnel. No attacks may be made. All submarines currently inport Surabaya regardless of readiness must conduct Base-to-Base movement to Brisbane and/or Fremantle. If the Dutch submarine base is active, any subs in Repair Boxes 2 or 3 or in the Hold Box are scuttled but are not counted as sunk. Remove *Holland* from Surabaya. Brisbane Base immediately becomes operational. *If this Event is rolled again, conduct Barrier mission in the East Indies Straits.*
2	**Special Mission: Barrier mission in the East Indies Straits.** Deploy eight submarines to the Makassar and Molucca Straits. Only contacts with C2 and TF results are used.
3	Roll twice on the ULTRA table.
4	No roll on the ULTRA table this turn.
5	**The Hunt for Wounded Bear.** The Battle of the Coral Sea has occurred. CinCPac orders submarines to search for the damaged carrier *Shokaku*. Twelve submarines must deploy to the Coral Sea, Bismark Sea, and/or Caroline Islands. Only TF results count for submarines in these OpAreas. If *Shokaku* is located in one of these areas this turn, place a damaged marker on her. This is a one time only event, after that treat as No Event.
6	**Aleutians Campaigns Opens.** Eight submarines must deploy to the Aleutians. Dutch Harbor Sub Base becomes operational and the player must designate a minimum of eight submarines to base from and RTB to Dutch Harbor. These submarines may only operate in the Aleutians and Kuriles, and must be replaced if lost. This is a one time only event, after that treat as No Event.
7	No roll on the ULTRA table this turn.
8	Roll twice on the ULTRA table.
9	If "Hunt for Wounded Bear" (result 5) has not occurred, conduct that Event instead. If it has: **The Battle of Midway.** Eleven submarines must deploy to Midway. All submarines in the Pierside Box at Pearl Harbor are immediately placed in the Hawaiian Islands patrol side up. All submarines in the Pierside Box at Dutch Harbor (if active) are immediately placed in the Aleutians patrol side up. Only TF results are used for the submarines in these OpAreas and at Midway. This is a one time only event, after that treat as No Event.

© 2012 Compass Games, LLC

War Period 2

If certain Events have not been rolled during the previous period, Manila and Surabaya Bases are no longer operational. Fremantle, Brisbane and Dutch Harbor Bases become operational, and the Aleutian Campaign opens.

Die Roll	Event
0	Roll twice on the ULTRA table.
1	No roll on the ULTRA table this turn.
2	**Relegation to Training Duty.** Remove three submarines from play. These may be at sea or a Base and may be under repair. These boats are not counted as sunk. The first submarines removed must be *Cachalot* and *Cuttlefish* if still in play. The player is not required to remove any submarine with an attack rating of '4' or higher. If the 'Subs Lost' marker is at twenty or higher, only two subs need be removed. If no eligible submarines remain in play, treat as No Event.
3	Roll twice on the ULTRA table.
4	No roll on the ULTRA table this turn.
5	**Special Mission: Blockade of Truk.** The player must deploy fifteen submarines to Truk. Only contacts with C2 and TF results are used.
6	**Torpedo Shortage.** Due to lagging production of the Mk-XIV torpedoes and delays in shipments, especially to Australia, four submarines are sent to dangerous inshore minelaying missions instead. These four submarines must deploy to one of the following SMZs: Formosa, Lingayen Gulf, Davao, Makassar Strait, Molucca Strait, Mios Woendi, or Surabaya. No S1 or S3 classes may be used (these had plenty of old Mk-X torpedoes). No attacks may be made.
7	**Political Pressure.** With Japanese submarines torpedoing *Yorktown*, *Wasp*, *Saratoga* and *North Carolina*, the brass asks why American subs aren't performing similar feats. Submarines are ordered to concentrate on warships. For all OpAreas except Empire and China, only contacts with TF results are used.
8	**Midway Base Operational.** Place a Submarine Tender on Midway in the War Progress Phase. This is a one time only event, after that treat as No Event.
9	**Special Mission: Solomons Campaign.** The player must deploy twelve submarines to Guadalcanal. Only contacts with TF results are used.

© 2012 Compass Games, LLC

War Period 3

If certain Events have not been rolled during the previous period, Midway Base becomes operational, and if still in service, *Cachalot* and *Cuttlefish* are relegated to training duty.

Die Roll	Event
0	If the date is not October 1943 or later, conduct Relegation to Training Duty instead. *If it is:* **Special Mission: End of Aleutians Campaign.** Player must deploy twelve submarines to Aleutians and Kuriles. Only contacts with TF results are used. Following this event, Dutch Harbor Submarine Base is closed, and all remaining S-boats (S1 and S3 classes) are relegated to training duty (removed from play). If and damaged submarines are at Dutch harbor, they remain there until they are repaired normally. This is a one time only event, after that, treat as No Event.
1	No roll on the ULTRA table this turn.
2	**Relegation to Training Duty.** Remove three submarines from play. These may be at sea or a Base and may be under repair. These boats are not counted as sunk. The first submarines to be removed must be *Argonaut*, *Narwhal*, and *Nautilus* if still in play (these large boats were used for special operations). The player is not required to remove any submarines with an attack rating of '6' or higher. If the 'Subs Lost' marker is at fifty or higher, only two submarines need be removed. If no eligible submarines remain in play, treat as No Event.
3	**Special Mission: Airstrike on Truk.** Player must deploy ten submarines to Truk. Only contacts with C2 and TF results are used.
4	**Special Mission: Invasion of the Marshalls.** Player must deploy twelve submarines to Majuro. Only contacts with TF results are used. Place a Submarine Tender on Majuro in the War Progress Phase. This is a one time only event, after that, treat as No Event.
5	**Special Mission: Airstrike on Palau.** Player must deploy twelve submarines to Palau. Only contacts with TF results are used.
6	Roll twice on the ULTRA table.
7	**Special Mission: Airstrike on Surabaya.** Player must deploy ten submarines to Surabaya. Only contacts with C2 and TF results are used.
8	**Special Mission: Invasion of Biak.** Player must deploy ten submarines to Mios Woendi. Only contacts with TF results are used. Place a Submarine Tender on Mios Woendi in the War Progress Phase. This is a one time only event, after that, treat as No Event.
9	If the date is not April, 1944 or later, roll twice on the ULTRA table. *If it is:* **Special Mission: Invasion of Saipan.** Player must deploy six submarines to Saipan and six submarines to the Bonins. Only contacts with TF results are used for these Zones/Areas. Place a Submarine Tender on Saipan in the War Progress Phase. *If this Event is rolled again, conduct:* **Special Mission: Invasion of Guam.** Player must deploy six submarines to Guam and six submarines to the Bonins. Only contacts with TF results are used for these Zones/Areas. Place a Submarine Tender on Guam in the War Progress Phase. This is a one time only event, after that, treat as No Event.

© 2012 Compass Games, LLC

War Period 4

If certain Events have not been rolled during the previous period, Aleutians Campaign is ended and Dutch Harbor is closed. Mios Woendi, Majuro, Saipan and Guam Bases become operational. If still in service, all S-Boats (S1 and S3 classes) plus *Argonaut*, *Narwhal*, and *Nautilus* are relegated to training or special operations.

Die Roll	Event
0	*If year is 1944*, conduct Airstrike on Ryukyus (Event 2). *If year is 1945:* **Special Mission: Invasion of Okinawa and the Hunt for Iron Maiden.** Player must deploy eleven submarines to Okinawa to cover the invasion and intercept the *Yamato* response force. Only contacts with TF results are used. This is a one time only event, after that, conduct relegation to training duty.
1	**Special Mission: Invasion of Leyte.** Player must deploy fifteen submarines to Davao and/or Formosa. Only contacts with TF results are used. *If this Event is rolled again, conduct:* **Special Mission: Liberation of the Philippines.** Player must deploy twenty submarines to Lingayen Gulf and/or Formosa. Only contacts with TF results are used. Submarine Base Subic Bay becomes operational in the War Progress Phase. This is a one time only event, after that, treat as No Event.
2	**Special Mission: Airstrike on Ryukyus.** Player must deploy eight submarines to Okinawa. Only contacts with C2 and TF results are used.
3	Roll twice on the ULTRA table.
4	No roll on the ULTRA table this turn.
5	**Special Mission: Airstrike on Formosa.** Player must deploy twelve submarines to Formosa. Only contacts with C2 and TF results are used.
6	**Relegation to Training Duty.** Remove three submarines from play. These may be at sea or a Base and may be under repair. These boats are not counted as sunk. The player is not required to remove any submarines with an attack rating of '7' or higher. If the 'Subs Lost' marker is at seventy or higher, only two submarines need be removed. If no eligible submarines remain in play, treat as No Event.
7	**Special Mission: Support B-29 raids on Japan.** Player must deploy six submarines to the Inland Sea to rescue downed pilots. No attacks may be made.
8	**Special Mission: Pursuit of *Ise* & *Hyuga*.** Player must deploy ten submarines to Formosa to intercept the hybrid carrier force which is fleeing from Singapore to Japan. Only contacts with TF results are used. This is a one time only event, after that, conduct "Support B-29 raids on Japan" (Event 7).
9	**Special Mission: Invasion of Iwo Jima.** Player must deploy five submarines to the Inland Sea. Only contacts with TF results are used for subs in the Bonins and Inland Sea. If this Event is rolled again, place a second Submarine Tender in Guam. If this Event is rolled yet again, treat as No Event.

© 2012 Compass Games, LLC

War Events for East Wind Early Campaign

Die Roll	Event
0	**Special Mission: Japanese landing on Luzon.** Four submarines must move to Lingayen Gulf to attack Japanese landing forces. Only contacts for C2 or TF results are used. If this Event is rolled again, roll on the ULTRA table using the WP4 line.
1	**Special Mission: Japanese invasion of Guam.** Four submarines must move to Guam to attack Japanese landing forces. Only contacts for C2 or TF results are used. If this Event is rolled again, roll on the ULTRA table using the WP3 line.
2	**Special Mission: Interdiction of Japanese support forces.** Two submarines must move to Formosa and each must remain until Spotted, Damaged, or an RTB result in received. Only contacts for C2 or TF results are used.
3	**Special Mission: Bombardment of port facilities at Okinawa.** Two submarines must move to Okinawa. If available, *Leviathan*, *Argonaut*, *Narwhal*, *Nautilus*, *Barracuda*, *Bass* and/or *Bonita* must be used for this Event due to their large caliber guns. Only TF contacts are used. If this Event is rolled again, roll on the ULTRA table using the WP3 line.
4	Roll on the ULTRA table this turn using the WP4 line.
5	Roll on the ULTRA table this turn using the WP3 line.
6	Advance Base set up. Place submarine tender *Holland* at Wake Island. If this Event is rolled again, roll on the ULTRA table using the WP3 line.
7	Roll on the ULTRA table this turn using the WP4 line.
8	If the "Japanese Landing on Luzon" (result 0) has not occurred, conduct that Event instead. *If it has, and date is September or earlier:* Roll on ULTRA table using the WP4 line. *If October or later:* **Japanese Army forces break through and approach Manila,** prompting withdrawal of submarines to Mindanao. Place submarine tender *Canopus* at Davao along with all undamaged submarines currently inport Manila. All damaged submarines at Manila are scuttled regardless of damage level, but are not counted towards Subs Lost. Any damaged submarines at sea must RTB to Pearl Harbor (or Surabaya if active). If this Event is rolled again, roll on the ULTRA table using the WP3 line.
9	**Dutch Intervention.** Feeling that they will be next, the Dutch intervene and send a submarine division to assist. Place submarine tender *Pelikaan* on Surabaya to indicate that it is active. *K-VIII*, *K-X*, *K-XI*, and *K-XII* are immediately available in the Broom Box at Surabaya. Dutch submarines use the same torpedo value as the Americans. If this Event is rolled again, roll on the ULTRA table using the WP4 line.

© 2012 Compass Games, LLC

SEQUENCE OF PLAY [4.0]

Steel Wolves

I. Strategic Segment

5.0 War Event Phase
Roll a die; if result is 0-4, reroll on War Events Table and implement the results. Also see [5.4].

6.0 Torpedo Improvement Phase
Consult Torpedo Improvement Table. If die roll is successful, move Torpedo Value marker one space to the right.

7.0 Intelligence Phase
- 7.1 Roll die on B-Dienst Table. Mark B-Dienst Area.
- 7.2 Check Master Submarine Reinforcement List for B-Dienst level change.
- 7.3 Check Master Submarine Reinforcement List for Enigma level change.
- 7.4 Determine Weather Systems
- 7.5 Place German (and/or Vichy) aircraft in OpAreas being searched.

II. Triple 'R' Segment (Reinforcement, Ready, Repair)

8.0 Submarine Reinforcements Phase
Consult the Master Submarine Reinforcements List. Place and remove submarines and Allied units as appropriate.

9.0 Ready Submarines Phase (at bases and sub tenders)
- 9.1 Roll for subs in the Pierside Box; if roll is = or < than Readiness # place in Ready For Sea Box.
- 9.2 Roll for subs in In-Port Box to ready them; if roll is = or < than Readiness # place in Pierside Box.
- 9.3 Roll a die for subs in the Work Up Box. If result = or < number in box, move submarine to In-Port.

10.0 Repair Phase (at bases)
Roll = or < than # in Repair Box to move sub to next box (3 → 2 → 1 → Work Up).

11.0 Prep For Operations Phase/Minefield Results
Move all submarines from "Done" section of each OpArea to "Operating" section AND determine minefield results.

III. Operations Segment (Conduct individually for each Sub)

12.0 Patrol Movement Phase
Subs currently deployed with their Patrol side up may move to the "Operating" section of an adjacent OpArea or Special Mission Zone if currently active and there is no '2' on the transit route. Roll for a Transit Event.

13.0 Search and Contact Phase
Follow Search and Contact instructions. If Wolf pack formation is desired, determine how many U-Boats can conduct combat simultane ously.

14.0 Combat Phase
- 14.1 First Attack Round
- 14.2 Counterattack Round
- 14.3 Withdrawal (Proceed to 14.4 or 14.5)
- 14.4 Re-Attack Rounds (Optional, followed by Withdrawal)
- 14.5 Ace Skipper Determination
- 14.6 Sub vs. Sub Combat
- 14.7 Endurance Check

15.0 Transit Movement Phase
Submarines that are in the Ready for Sea Box of a base, are outbound to a patrol area, or have an RTB marker and are in the "Operating" section of an OpArea may move a number of OpAreas up to their movement rating. Roll for a Transit Event if applicable. Place outbound submarine in "Done" section of OpArea Patrol side up if it intends to patrol there next turn or Transit side up if it intends to continue on to another OpArea or Base.

IV. End Turn Segment (After all subs have conducted movement and combat)

16.0 Conclude Turn Phase
Return German and/or Vichy aircraft to base. Remove Weather Systems. Remove Spotted markers from subs on roll of 0-6; Automatically remove Spotted markers upon return to Base. Check Scenario Victory Conditions. Advance Date markers.

17.0 War Progress Phase
Check for War Period Transition and occurrence of Barbarossa

Compass Games

SEQUENCE OF PLAY [4.0]

SILENT WAR

I. STRATEGIC SEGMENT

5.0 War Event Phase
Roll a **d10**; if result is 0 – 3, reroll on War Events Table and implement the results

6.0 Torpedo Improvement Phase
Consult Torpedo Improvement Table. If ships sunk permit, roll d10. If result is >= than ships sunk #, move the torpedo marker one column to the right.

7.0 ULTRA Phase
Roll a **d10** on ULTRA Table, noting any die roll modifiers. Mark ULTRA Areas: add one (+1) to Area Activity Chart rolls and draw one (1) extra ship from each cup.

II. TRIPLE 'R' SEGMENT (Reinforcement, Ready, Repair)

8.0 Submarine Reinforcement Phase
Consult the Master Submarine Reinforcement List. Place and remove submarines as appropriate.

9.0 Ready Submarines Phase (at bases and sub tenders)
Move subs in the Pierside Box to the Ready for Sea Box. Roll for subs in Broom Box to ready them: roll <= Ready # to place in Ready for Sea Box; if roll is > Ready # place in Pierside Box.

10.0 Submarine Repair Phase (at bases)
Roll <= # in Repair Box to move sub to next box (3 → 2 → 1 → Broom)

11.0 Prep for Operations Phase
Move all submarines from "Done" section of OpArea to "Operating" section.

III. OPERATIONS SEGMENT (Conduct individually for each Sub)

12.0 Patrol Movement Phase
Subs currently deployed with their Patrol side up may move to the "Operating" section of an adjacent OpArea or Special Mission Zone if currently active. Roll for a Transit Event.

13.0 Search and Contact Phase
Follow Search and Contact on-map instructions (with +1 die roll modifier for ULTRA, +2 die roll modifier for a barrier wolfpack, etc.)

14.0 Combat Phase
14.1 First Attack Round
14.2 Counterattack Round
14.3 Withdrawal (Proceed to 14.4 or 14.5)
14.4 Re-attack Round (Optional, followed by Withdrawal)
14.5 Super Skipper Determination
14.6 Sub vs Sub Combat
14.7 Check Endurance

15.0 Transit Movement Phase
Submarines that are in the Ready for Sea Box of a base, are outbound to a patrol area, or have an RTB marker and are in the "Operating" section of an OpArea may move a number of OpAreas up to their movement rating. Roll for a Transit Event if applicable. Place outbound submarine in "Done" section of OpArea Patrol side up if it intends to patrol there next turn or Transit side up if it intends to continue on to another OpArea or Base.

IV. END TURN SEGMENT (After all subs have conducted movement and combat)

16.0 Conclude Turn Phase
Remove Spotted markers from subs on roll of 0 – 6. Automatically remove Spotted markers upon return to Base. Check Scenario Victory Conditions. Advance Date markers.

17.0 War Progress Phase
Check War Period Transition Table. If month has a number, roll **d10**; if result >= #, advance War Period.

Steel Wolves Sequence of Play on Reverse Side

Compass Games
